

INTENDED APPLICATION:
OVERHEAD SHOWER / HANDSHOWER

IMPORTANT – Wall Rough-in Requirements

This product is supplied with a G1/2 BSP male wall connector.

A concealed G1/2 BSP female threaded fitting must be provided within the wall during rough-in.

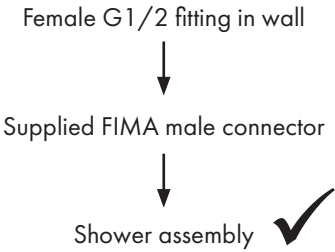

The supplied male connector is designed to screw directly into this concealed female fitting and forms part of the finished installation.

Do not install a male wall nipple or wall outlet fitting during rough-in, as the supplied connector replaces these components.

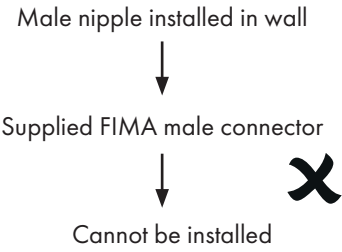

Installer Note

Prior to wall sheeting and tiling, ensure a G1/2 BSP female threaded fitting is securely fixed within the wall at the nominated outlet position. The supplied male wall connector must be used as part of the final installation.
