

Nanopore Sequencing for Biosecurity

27-29 June, 2023 | Curtin University, Perth WA

Nanopore sequencing has revolutionised sequencing for biosecurity due to its portability, small footprint, and minimal capital investment.

This biosecurity focused workshop aims to contribute to capacity building and establish a Nanopore community of practice focusing on biosecurity and eDNA.

This full three-day intensive community workshop will provide:

- Insights into the latest Nanopore sequencing technology
- World-class introduction to sample preparation with either a focus on amplicon (e.g. metabarcoding) or whole genome sequencing
- Q&A panel discussion on how to apply Nanopore sequencing to biosecurity issues
- Hands-on training
- Experience in quality control
- Introductions to downstream bioinformatic data analysis
