

# TRANSPORT INFRASTRUCTURE

# Transport infrastructure maintenance services

From our city centres to our remote territories, roads, rail and other transport infrastructure are critically important to the social and economic success of every Australian community and business.

Duratec has many years' experience in the maintenance and protection of these assets and understands how essential this is in ensuring unobstructed public access to these networks, lengthening the asset's life, and improving safety performance.

## Condition assessments

Our Technical Division consists of a team of specialist engineers who conduct technical condition assessments on a wide range of structures.

Once the survey is complete, you will receive a report that identifies the root causes of the problems, provides innovative fit-for-purpose solutions and realistic budget estimates for the costs of remediation versus demolition and replacement.

## Access solutions

Experience has taught us that selecting the right access solution for a project can make a substantial difference in quality, program and cost to the project.

Through a combination of our own equipment and our partnerships with a carefully selected team of access partners, we will work with you to develop a cost-effective, safe and fit-for-purpose solution.

## Remediation

Our project teams work throughout the metropolitan and regional areas.

We deliver projects from minor maintenance to major refurbishment in road and rail maintenance and civil infrastructure upgrades.

Our integrated and certified management systems and experience interacting with rail and road traffic and diverse environmental conditions ensures a safe and low impact project.

## Maintenance services

- Joint replacement
- Pile repair and protection
- Blasting and painting
- Concrete repair
- Cathodic protection
- Structural strengthening
- Bearing replacement
- Culvert and pipe relining
- Crack repairs
- Antiraffiti coatings
