FAZE®

Collaborating With Architects, Designers And Builders To Design Luminaires With Unmistakable Quality.

FAZE is a brand of Radiant Lighting, with over 35 years at the forefront of lighting quality, innovation and design.

As lighting designers, we understand light and what can be achieved using well designed luminaires that are made from the best components.

Based in Perth, FAZE has grown into a truly international brand, as we source the best quality materials from Japan, Germany and Italy. With a new state of the art production facility in China, we create the best quality luminaires that
will stand the test of time. Prioritising sustainability means our luminaires are developed with their impact on the environment at the forefront of our mind, intentionally utilising components that can be replaced and repaired.

Our entire collection, from fittings to reflectors, is stored in our warehouse in Perth. Any customisations and assembly is completed by our qualified electricians, to ensure your fittings aren't only ready to go on-site, but are up to our highest standards.

Colour Rendering Index

Colour Rendering Index (CRI) is the accurate measurement of the capability of a light source to exhibit, in high grade, the true colour of various objects.

The metric scale of CRI is from 1–100, with 100 being the closest to natural light. Therefore the higher the CRI, the better the light source is at rendering colours accurately.

How Do We Compare?

A high CRI is crucial when designing any lighting plan, from residential to commercial, as it will make sure that all of the architectural features and materials in your space are enhanced exceptionally.

The high CRI of all FAZE products are perfect examples of this, as they will enhance the details in stone counter tops, the rich colouring of hardwood floors and everything in between.

99% of our luminaires now have a 90+ CRI.

Correlated Colour Temperature

Correlated Colour Temperature (CCT) is a number, expressed in degrees Kelvin, which represents the colour of a light source. It is measured on a scale of 1,000K to 10,000K and indicates the warmth of the light. Light sources with low CCT provide light that appears warm, while light sources with high CCT values provide light that appears cool.

How Do We Compare?

Unlike CRI, there isn't a right or wrong choice when choosing your CCT, it is more about personal preference.

However, warm lighting 2700K & 3000K is generally used for relaxing and calm environments, such as bedrooms and lounges. While cool lighting 4000K is used in environments where you need to concentrate, such as offices and studies.

All FAZE products are available in a colour temperature of 3000K, 4000K, and even 2700K for some fittings, the choice is all yours.

Crafting Your Perfect Environment

Lighting is a crucial aspect of interior and exterior design; enhancing aesthetic appeal, while helping craft a safe and comfortable environment.

Good lighting can make or break any design plan, it is ineffective to design your home with the best architectural features and furnishings if the lighting they are paired with is not first class.

Downlighting

Downlights are the essential foundation of any lighting plan. With the primary purpose to provide functional and ambient light throughout any space, the downlight is the core element of lighting.

Learn More Pg. 04

Surface Mounted

Surface mounted fittings have been a key piece of lighting design for decades. Their design value lies in their flexibility, since they can be installed in almost any space without dramatically altering the ceiling.

Learn More Pg. 08

Suspension

Suspension lights are suitable for lighting large spaces, as well as directing light onto a particular area. Suspension lighting has become a decorative addition to interior design, perfect for both individual use or clustered in a group.
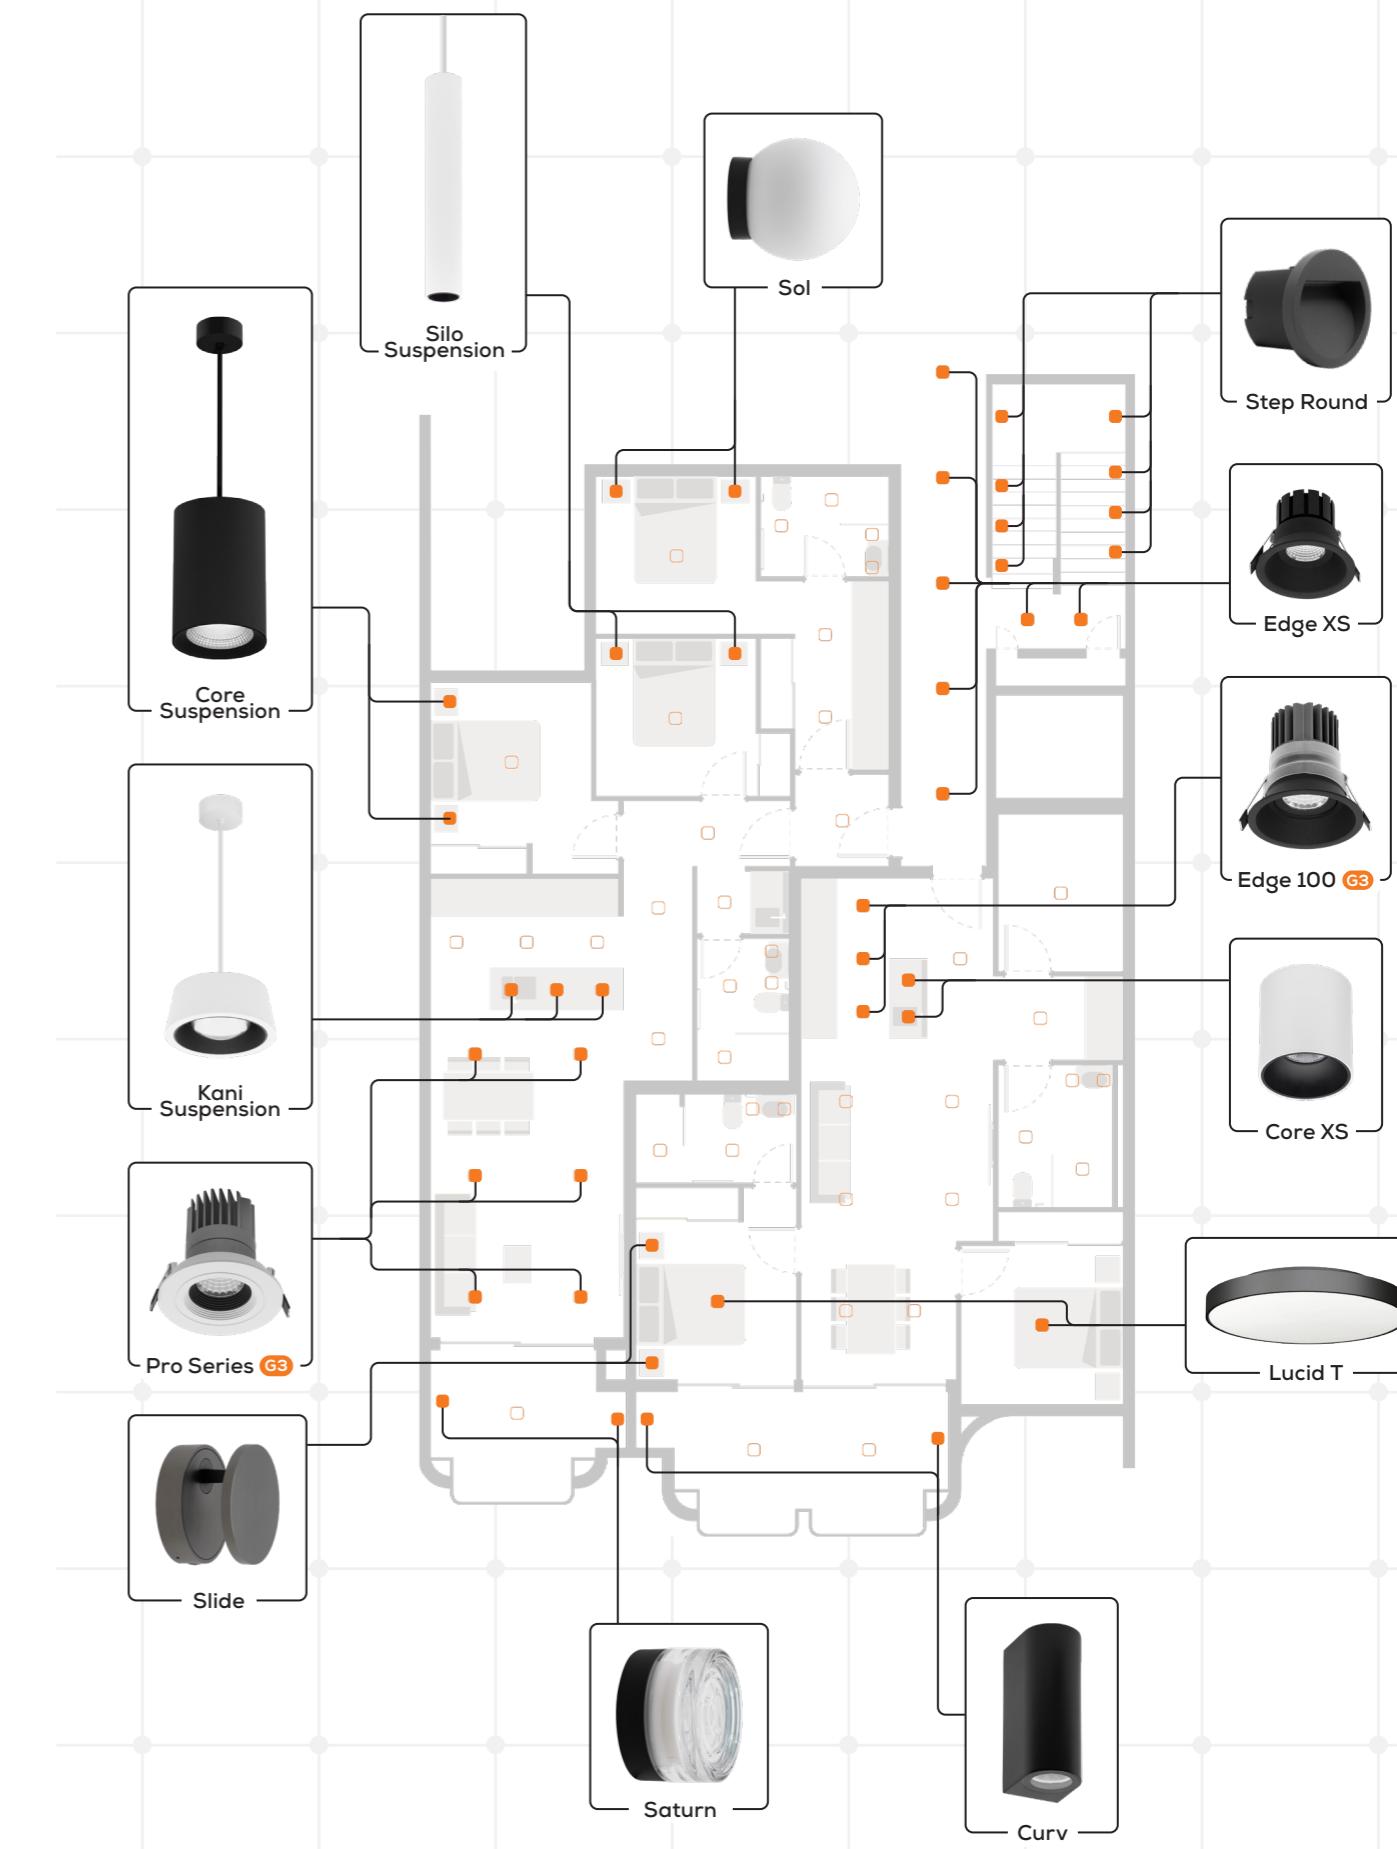

Learn More Pg. 12

Wall

Wall lights are a versatile lighting choice that not only add character to your space but are also incredibly functional. They are a key component of any layered lighting scheme, due to all the different types that are available.
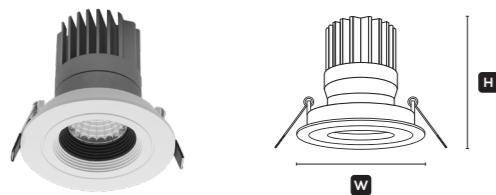

Learn More Pg. 16

LED Strip

LED Strip lighting provides a minimal and functional style to any project. As they can be surface mounted or recessed, they are an ideal design solution in a variety of spaces. Our various profiles and wattages allow for flexible positioning inside, and outside the home.

Quality is our guiding light in everything we do.

The FAZE Laboratory team collaborates with architects, designers and builders daily to incorporate light into projects. Our collaborative approach to lighting has helped inform many of our truly unique and innovative luminaires.

Aiming to create unique designs, providing a variety of lighting solutions and endless design possibilities with its luminaires.
