Mezzanine Floors & Barriers

MEZZANINE FLOORS

Mezzanine floors, otherwise known as raised storage areas, are a cost-effective method of doubling your existing floor space. These can be constructed from our modular structural system or Global Rack pallet racking. All our mezzanine floors are designed to Australian standards and are fully customisable.

What we need to know to be able to design your Global mezzanine floor:

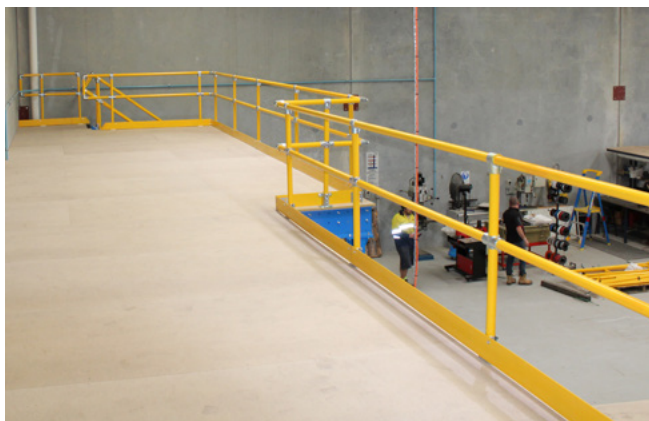

- Length, depth and height
- Free-standing or attached to an existing structure
- Position of access gates, hand rails and stairs
- Floor loading requirements
- Other special requirements

CLAMP STYLE HAND RAIL

Clamp style hand rail is durable, and uses a galvanised clamp system that allows for the construction of any hand rail or barrier system. This versatile system can be used for a variety of other applications such as trolley bays, animal enclosures and playgrounds without the need for welding or fabricating custom structures.

Bollards

MODEL	HR100	HR105	HR110	HR115
HEIGHT	1000mm		1200mm	
DIAMETER	120mm		160mm
