
MAX-Tension™ End Terminal - Vulnerable Road User (VRU) Protector

TECHNICAL BRIEF

Overview:

In adverse weather conditions the VRU Protector can become loosened and sometimes detached from its mounted position.

To overcome the risk noted in regions which experience adverse weather, installers may fix self-tapping Tek screws to the nose piece to secure it the MAX-Tension™ End Terminal head.

Rectification:

Using a drill driver, fix no more than two self-tapping Tek screws on each side of the MAX-Tension™ End Terminal on the edges where the nose piece covers the MAX-Tension™ End Terminal head piece as shown below.
