February 2016 was the hottest month ever recorded, this was due to anthropogenic emissions of CO₂. Australia undertook to work toward keeping global warming below 2 degrees & to make efforts to keep it below 1.5 degrees. We are already committed to > 1.5 degrees. Every gram of coal burnt, wherever it is from is an active decision to drive us & many other species closer to extinction within the next 30 years. This genocide will be on the hands of those who make such decisions. How does that sit with your conscience?

Climate change is already changing our weather and all our lives. We want the Government to plan for sea-level rise, storm surges, changed rainfall patterns and provide for distributed energy, water and food systems so that our cities, suburbs and the bush are resilient to dramatic change.

The coal industry is in structural decline. We want a moratorium on all new coal mines and a plan for a just transition for the Hunter Valley so that we can rehabilitate the damage the mines have done, and provide for sustainable jobs and industry.

Scrap plans for a fourth coal terminal in Newcastle and protect the world-renowned wetlands of Ash Island by adding them to the Hunter Wetlands National Park.
