**Subject:** Wind Power in NSW

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, Lucia Fischer 7112

This could act as a deterrent for investors in NSW.

Everywhere in Europe, including the North Sea off Denmark, Germany, Holland and the United Kingdom, have many wind farms. The people there do not act like the Australian people. In fact, the wind farms, in terms of employment, replaced fishing in the North East of the United Kingdom – former fishermen now man the boats servicing the turbines.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

I commend the framework,. The positives of shifting away from buffer zones, benefit sharing, noise guidelines and the evidence that wind farms do not decrease the value of a property or all great additions

However the visual impact section over emphasises this issue in relation the other points made. Community consultation is essential but must be carried out at a suitable time frame on the process to be meaningful to all parties.

8km limit on the view is too great. This should be reduced to be more in line with other states. Cumulative impact should also be considered but not to the detriment of project. Whilst there is an impact from any wind farm it is nowhere as detrimental as an open cut mine, gas field or a power station.

These restrictions are not applied to other states and will drive investment away from NSW

Yours faithfully, Doug Stuart 2066

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, Rodney Smidt 2077

Dear Sir/Madam,

The letter below is too complaisant. I preface it with my own words.

It's essential for the sake of our children and grandchildren to phase out coal as soon as possible. If we do this, we may be able to convert the forthcoming global warming catastrophe into a global warming disaster.

Wind energy is one way to mitigate the disaster. We must pull out all stops to encourage wind energy.

Coal is a stranded asset.

I am not a catastrophist. I am a realist.

It's high time to inject adrenalin into the population to act.

The form letter follows:

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, George Carrard 2223

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects", such as transmission lines, open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, Joan & Warwick Hilton 2518 2518

Dear Sir/Madam,

I write to comment on the New Wind Energy Planning Framework. With NSW Govt dragging its heels on the urgent transition to renewable energy, we are in need of a new Framework that provides greater certainty and guidance on the assessment of much needed wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.
