**Subject:** Submission on the New Wind Energy Planning Framework

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework.

I oppose too stringent an emphasis on visual assessments of New Wind Energy Planning.

Climate change and global warming caused by increasing CO2 levels mean we urgently need to transition away from fossil fuels and increase our investment in renewable energy. The wind energy sector has already proven that it should play a role in that transition, so it is important that the New Wind Energy Planning Framework allows opportunities and encourages investors to develop wind energy projects in NSW.

I do support a new Framework that provides certainty and guidance on the assessment of wind energy projects in NSW. Positive aspects include an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that there is no hard scientific evidence that wind turbines cause any adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. The visual impact of wind turbines is relatively non-invasive especially compared to other major projects such as open cut coal mines, power stations, gas drilling or even high-rise residential buildings. I therefore oppose any more stringent visual assessment for wind projects than any other project as it could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, Julius Timmerman 2783

**Subject:** Plan for the Future

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, Peter Hunt 4055

**Subject:** Submission on the New Wind Energy Planning Framework

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

It is time that the reactionary right in NSW, and elsewhere in Australia, wake up to the scientific reality of global warming and the truly awful consequences that will emanate from this crisis. With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are as bad as other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW. And not only are the great scars of coal open cuts are far longer lasting blight on the landscape, there is almost certainly a massive under allowance for the costs of rehabilitation. In other words, these largely overseas-owned companies will have corporatised the profits and socialised the losses. That is despicable, absolutely unacceptable.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, Peter Green 2776

**Subject:** Increase wind turbines instead of new coal mines

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I am not alone in thinking that wind turbines are actually quite attractive. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

I used to live in Denmark. The electricity supplier that previously supplied me with power from burning Polish coal is now the largest supplier in the world of offshore wind power. When I visited them (DONG Energy) recently, I was in a room in Copenhagen which controlled 50% of the world's offshore wind turbines, but of course they control a large number of onshore wind turbines as well. The population of Denmark is not that much more than that of NSW and is spread over a much smaller area of land. They don't have significant community reaction problems.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Don't forget that when wind turbines are installed the only cost of power is the cost of maintenance, which is rapidly being reduced. I work in that area myself.

Yours faithfully, Robert Randall 2068

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, Dan Wilkins 7054

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework, which, if adopted, will provide greater certainty and guidance to those undertaking wind energy projects in NSW.

Apart from contributing to initiatives that will help to reduce greenhouse gas emissions, the Framework will support an industry that has the potential to grow jobs and income in an area other than mining for Australia.

It is particularly important that NSW be helped to catch up to other more proactive States in the matter of clean energy generations.

As someone who has recently travelled the length of the Hunter Valley and northwards, between the coal mines that line the track, I must say that a row of elegant windmills would be infinitely preferable to the ugly scars and slag heaps that have ruined a once beautiful part of NSW.

I hope that the new Framework will be finalised in a timely manner and that every effort will be made to promote the development of the Wind Power Industry in NSW.

Yours faithfully, Gail Abbott 2041

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, Kevin Parkes 2210

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.
