Subject: Submission on the New Wind Energy Planning Framework

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework places emphasis on the visual impacts of wind turbines. Coming from Denmark, where windmills are seen as aesthetically pleasing, I do not see the visual impacts of wind energy projects to be a problem, let alone a significant problem. Provide a framework for private citizens, particularly in rural areas, the chance to invest in wind projects, and sentiments will automatically improve in regard to the aesthetics of windmills, as the financial returns of wind energy enriches the lives of these citizens. Strict and artificial requirements on the visual impact of windmills would be deterrents for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure that its new Framework is finalised in a timely and fair manner, so that it can soon promote investment in wind energy here in NSW.

Yours sincerely, Thomas Britz, Senior Lecturer, UNSW Australia.

Subject: Submission: New Wind Energy Planning Framework

Dear Sir or Madam,

I am happy to have this opportunity to comment on the New Wind Energy Planning Framework. Overall, I support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

We urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy. Recent reports of increasing CO2 levels causing warming of the Earth's atmosphere and oceans, glacial retreat, sea level rise, and ocean acidification make that abundantly clear.

As wind energy will play an important role in this transition, the New Wind Energy Planning Framework must encourage investors to develop wind energy projects in NSW.

The new Framework includes a number of positive aspects, particularly:

- an increased emphasis on community engagement and consultation;
- a shift away from arbitrary, strict buffer zones;
- confirmation that wind turbines do not cause adverse impacts on health.

I am concerned, though, that the new Framework puts too much emphasis on the visual impacts of wind turbines. The visual impacts of wind energy projects cannot reasonably be considered so much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, as to warrant a more stringent assessment. I am concerned that this could act as a deterrent for investors in NSW.

Wind energy offers significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy in NSW and is finalised in a timely manner.

Yours faithfully, Hilary Howes 2612

Subject: NSW needs Wind Power Now!

Dear Sir/Madam,

I am writing to inform you that I support a new Framework that will provide greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of polar ice sheets, glacial retreat, rising sea levels and the acidification of our oceans it is clear that urgent action is required in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, as will the New Wind Energy Planning Framework in encouraging investors to develop wind energy projects in a state which currently lags behind the rest of Australia in its commitment to providing sources of clean renewable energy.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation and a shift away from arbitrarily created and overly strict "buffer zones." A new Framework will also confirm that wind turbines do not cause adverse impacts on health as stated by those whose vested financial interests make them hostile to the idea of NSW transitioning to renewable energy.

I am concerned, however, that the new Framework places too much emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are significantly greater than those of other major projects, such as open cut coal mines or high-rise residential buildings, or that they warrant more stringent assessment than other types of projects. Such assessments could easily become a deterrent for those seeking to invest in clean energy in NSW, resulting in unacceptable delays in adopting what is an essential new technology if our planet is to repair itself and survive.

Wind energy has the ability to be of significant benefit to the people of NSW and I urge the state government to ensure its new Framework promotes investment in wind energy instead of discouraging it as has been the case so often in the past.

Thank you for allowing me the opportunity to express my views to you on this vitally important subject. I look forward to the day when all energy in NSW will be derived from 100% renewable sources.

Yours faithfully, Ben Rumble 2113

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, tracey bourke 2262

Dear Sir/Madam,

I am currently in Germany, on holiday, where there are windmills everywhere. They do not make intrusive noise, they are not visually unpleasant and I have not seen or experienced any impact on people's or animal's health.

Indeed I cannot see a reason why farmer's themselves do not put up their own windmills and sell the energy they generate back to the energy providers.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Subject: Submission on the New Wind Energy Planning Framework

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework.

I support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW, however I am concerned the new Framework puts too high an emphasis on the visual impacts of wind turbines.

In my experience the visual impacts of wind turbines are more acceptable than the visuals of open cut coal mines and coal fired power stations they seek to replace. Compared to the coal stockpiles and final voids, the permanent haze from the mining, transport and burning of coal, wind turbines are positively beautiful.

Even if wind turbines are something some people would prefer not to see in the landscape, surely the damage to health inflicted by coal on their fellow citizens and the urgent need to stabilise the climate for the survival of future generations should be accorded a higher priority than aesthetics.

Unlike coal mines and power stations, wind turbines leave no lasting damage to the environment and health and when no longer required they leave minimal evidence they ever existed.

It is important the benefits that wind turbines can contribute to efforts to transition away from fossil fuels as a matter of urgency is not frustrated by giving undue weight to subjective opinions.

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, April Nutter 3156

William Brindle
