**Subject:** Submission on the New Wind Energy Planning Framework

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, Sally Gillespie 2040

**Subject:** Submission - New Wind Energy Planning Framework

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I support a new Framework that will provide greater certainty and guidance on the assessment of wind energy projects in NSW.

We can see that increasing CO2 levels are causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification. So it is clear that we urgently need improved action in NSW to expedite the transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will undoubtedly play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too much emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are more significant than those of other major projects, such as open cut coal mines or high-rise residential buildings. They do not warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

The people of NSW will derive significant benefits from wind energy and so I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and that it is finalised in a timely manner.

Yours faithfully, Riki Davidson 2283

Dear Sir/Madam,

We know the country is getting hotter, all over the world bureaus are recording highest ever temperatures...we have ameliorated the situation with ozone layer, now its time to do it with CO2s.

I am very happy to, and thank you for the opportunity to comment on the New Wind Energy Planning Framework. I support a new Framework that provides certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW. THE FIRST TIME I SAW WIND TURBINES IN GREAT NUMBERS WAS IN SPAIN, I DROVE THROUGH A VALLEY THAT WAS FULL OF THEM AND I WAS EXCITED BY IT, I THOUGHT IT WAS A MAJESTIC SIGHT, THE TURNING PROPELLORS AND THE LONG NARROW SUPPORTS WERE TRULY ELEGANT. I THINK THE DETRACTORS OF WIND TURBINES HAVE VESTED INTEREST IN COAL AND OIL

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, JENNIFER ALLISON 2429

**Subject:** Wind Energy Planning Framework

Sir,

Given our commitments at Paris concerning climate change, we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However the new Framework puts too high an emphasis on the visual impacts of wind turbines. I agree there is an impact, but it is much less than open cut coal mines and coal fired power stations. The more stringent assessment proposed in the Framework could act as a deterrent for investors in NSW.

Wind energy has significant benefits and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, Barry Lees 2159

**Subject:** LET'S CONVERT TO WIND POWER ASAP

Dear Sir/Madam,

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

We urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification speak clearly.

Wind energy is vital for that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However, the new Framework puts too high an emphasis on the visual impacts of wind turbines. This could act as a deterrent for investors in NSW. Look at the eyesore that results from open cut coal mines or high-rise residential buildings. This could act as a deterrent for investors in NSW.

We need to change quickly.

**Subject:** NSW renewables are lagging behind the rest!?

Dear Sir/Madam,

Regarding the New Wind Energy Planning Framework. I support a greater certainty and guidance on the assessment of wind energy projects in NSW.

Rising carbon dioxide levels are causing increased warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification.

Obviously we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

The positive aspects to the new Framework include an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

The new Framework disturbingly puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Big increases in wind energy would have significant benefits for the people of NSW. I ask the government to ensure the new Framework promotes investment in wind energy here in NSW and is acted on soon.

Yours faithfully, Duncan Bourne [REDACTED] Ultimo NSW 2007

**Subject:** Guarantee a Wind Power Future

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. We generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However we are concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. We do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and we urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, Dorann and David Ackery 2330

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

The whole country is involved in all actions taken by all governments – the effects of bad decisions in matters affecting the life support system are not confined to any one place. Money is not a resource, politics is not a science, and current economic theory is little more than attempted witchcraft.

Yours faithfully, {Kay} {Schieen} {3885}

**Subject:** Submission on the New Wind Energy Planning Framework

Dear Sir/Madam, Since 1997 I have been purchasing 100% green energy. This has meant that my electricity costs have been higher by about 30%. If I can do it as a pensioner, then NSW can.

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.
