**Subject:** I want more wind energy in NSW. Submission on the New Wind Energy Planning Framework

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, James Stone 2527

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours Craig Andrews 2428

Dear sir/madam

Ugent improvement is needed in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects.

I am flabbergasted at the high emphasis on visual impacts of wind energy projects. Elegantly rotating turbines hardly rate against smoke stacks, open cut mines and even highrise buildings. I do recall the previous PM, climate change denialist, Tony Abbot disliking their appearance, is this still affecting the New Wind Energy Planning Framework?

Yours faithfully, Dr Bronwen Evans 2010

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

My son currently lives in the ACT and is already commenting on how well that renewable energy program is going. He and his friends are counting on us to make the right decisions for the future of the planet. When I lived in the ACT I used to love the drive along past Lake George. The wind turbines looked extraordinary. They seemed to embody a whole new revolution.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW. As I mentioned above, I find the wind turbines at Lake George to be beautiful sentinels. They are elegant and way way more pleasant to look at than a coal generator.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, Robyn Holder 2068

Dear Sir/Madam,

We only need to trap 10 hours of sunshine to power the whole worlds' energy at current levels for a whole year. That does not even take into account the use of wind power.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW. Why not put solar panels and wind turbines along motorways and railway lines, where there visual impact will be almost negligible, given how ugly motorways are anyway?

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, Chris Bower 2049

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

My son currently lives in the ACT and is already commenting on how well that renewable energy program is going. He and his friends are counting on us to make the right decisions for the future of the planet. When I lived in the ACT I used to love the drive along past Lake George. The wind turbines looked extraordinary. They seemed to embody a whole new revolution.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW. As I mentioned above, I find the wind turbines at Lake George to be beautiful sentinels. They are elegant and way way more pleasant to look at than a coal generator.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, Robyn Holder 2068

**Subject:** Submission on Wind Energy Planning Framework

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing anthropogenically-generated greenhouse gases causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need much greater action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy should play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages and supports investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. Visual impacts of wind energy projects are much less significant than many other major projects, such as open cut coal mines, freeways or high-rise residential buildings, and do not warrant a more stringent assessment. This would act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours sincerely, Alexa Troedson Lane Cove NSW 2066
