**Subject:** Submission on the New Wind Energy Planning Framework

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, Ilona Roberts 2490

**Subject:** Submission to New Wind Energy Planning Framework

Dear Sir/Madam,

I am glad to have the opportunity to comment on the New Wind Energy Planning Framework. I support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW, but wish to make some comments.

I actually like the look of wind turbines. They are elegant giants on the landscape and are generating energy while eliminating the need for horrible coal mines and coal fired power stations that don't just look ugly but actively destroy many aspects of the environment and our lifestyle.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. **Subject:** Submission on the New Wind Energy Planning Framework

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I support greater certainty and guidance on the assessment of wind energy projects in NSW.

It is clear that climate change is gathering pace and we urgently need improved action in NSW to transition from fossil fuels to renewable energy.

Wind energy will play an important role in that transition; the new Wind Energy Planning Framework should encourage investors to develop wind energy projects in NSW.

I welcome the new Framework's increased emphasis on community engagement and consultation; the shift from arbitrary strict buffer zones that do not consider context; and confirmation that wind turbines do not cause adverse impacts on health.

However the emphasis on the visual impacts of wind turbines seem strange and is likely to act as a deterrent to investors. An open cut coal mines or high-rise development, motorways all have greater visual as well as environmentally damaging impacts. These should warrant stricter regulations and do not!

Wind energy will have important economic and environmental benefits to the people of NSW. I encourage the State government to ensure its new Framework promotes investment in wind energy here as soon as possible.

Yours sincerely, Kerry Brown 2782

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours sincerely Dene McMillan 2431 2431

**Subject:** Wind

Dear Sir/Madam,

The reality of climate change, its effects on us and the terrible future burden it will impose on us and our children is obvious to all of us who are not blinded by opportunities to profit at any cost.

We urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

There are a number of positive aspects to the New Wind Energy Planning Framework: an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; confirmation that wind turbines do have an adverse impact on health.

However, the new Framework puts too high an emphasis on the visual impact of wind turbines. The the visual impact of wind energy projects is no more significant and often less so than that of other major projects, such as open cut coal mines or high-rise residential buildings. More stringent assessment would act as a deterrent for investors in NSW.

Wind energy is highly beneficial to the people of NSW. Please ensure that the new Framework promotes investment in wind energy here in NSW and is implemented in a timely manner.

Sincerely, Felix Prael 2067

Dear Sir/Madam,

Thank you for the opportunity to comment on the New Wind Energy Planning Framework. I generally support a new Framework that provides greater certainty and guidance on the assessment of wind energy projects in NSW.

With increasing CO2 levels causing warming of the Earth's atmosphere and oceans, the breakup of ice sheets, glacial retreat, sea level rise, and ocean acidification, it is clear that we urgently need improved action in NSW to transition away from fossil fuels and increase our investment in renewable energy.

Wind energy will play an important role in that transition, so it is important that the New Wind Energy Planning Framework encourages investors to develop wind energy projects in NSW.

There are a number of positive aspects to the new Framework including an increased emphasis on community engagement and consultation; a shift away from arbitrary, strict buffer zones; and confirmation that wind turbines do not cause adverse impacts on health.

However I am concerned that the new Framework puts too high an emphasis on the visual impacts of wind turbines. I do not agree that the visual impacts of wind energy projects are that much more significant than other major projects, such as open cut coal mines or high-rise residential buildings, that they warrant a more stringent assessment. This could act as a deterrent for investors in NSW.

Wind energy has significant benefits to the people of NSW and I urge the NSW government to ensure its new Framework promotes investment in wind energy here in NSW and is finalised in a timely manner.

Yours faithfully, Narelle Patterson 2077
