To whom it may concern,

**FEEDBACK ON THE GREENER PLACES
DRAFT POLICY FOR DISCUSSION**

SPEL Environmental notes the release of the Greener Places Policy Document draft for public discussion. We commend the NSW Government on setting a policy direction that encourages development, both public and private, to achieve a more environmentally resilient, water sensitive, inter-connected and ecologically sustainable outcome for our future communities.

SPEL Environmental has a variety of both green and grey solutions for stormwater quality treatment and quantity management, and over 20 years' experience in this field. Please refer to our website for more details (www.spel.com.au)

SPEL Environmental offers our experience free of charge or obligation, to workshop proposed detailed concepts and case studies that could contribute to manuals and toolkits as they are developed. As industry leaders and Sustaining Members of Stormwater NSW, we would welcome the opportunity to collaborate with Department Officers and share our insights gathered from many years of driving innovation in a traditionally conservative industry.

We look forward to hearing from the Department as further detailed documents are prepared and would like to be involved in stakeholder workshops.

Regards,

Andy Hornbuckle
