

Caltex own and operate the Newcastle Pipeline (NPC) that runs along the easement shown in your West Schofields Draft Indicative Layout Plan.

The NPC is located in the same trench same easement as the Jemena Northern Trunk Gas Main.

Any proposed development near to existing licenced high pressure gas and/or liquid hydrocarbon pipelines must go through a risk assessment process called a Safety Management Study in order to comply with the Pipelines Regulation 2013 and the Australian Standard for Pipelines AS2885.3 2012.

A preliminary SMS should be conducted with all stakeholders present. I have attached our standard conditions to assist with general NPC information.

Regards,  
Rob
