Acknowledgements

We acknowledge the Elders, their families and forebears of both clans the Boonwurrung and Wurundjeri tribes of the Kulin Nation and Wadawurrung - West of the River in Wyndham, who are the Traditional Custodians of Melbourne land for many centuries.

We acknowledge that the land on which we work is the place of age old ceremonies of celebration, initiation and renewal and that the Kulin Nation people’s continuous living culture has played a significant and unique role in the life of this region.

We would like to thank the anonymous focus group participants who shared their experiences with the council members and Victoria University and Monash University researchers.

The Victorian Government contributed $45,000 to the delivery of this project through the Community Sports Infrastructure Fund.

PROJECT DELIVERY:

➢ Victoria University and Monash University
  • Associate Professor Ruth Jeanes, Monash University
  • Professor Clare Hanlon, Victoria University
  • Professor Ramón Spaaij, Victoria University
  • Professor Rochelle Eime, Victoria University
  • Dr Sarah Oxford (Project Manager), Victoria University
  • Dr Fiona McLachlan, Victoria University

Maribyrnong City Council  Victorian Government
Melbourne City Council

Women's Health West
The Women’s Participation in Sport and Active Recreation in Melbourne’s West: Action Plan for Change (“the Action Plan”) provides strategic direction to partners on challenging the gendered barriers to women’s participation in sport and active recreation.

Women and girls in the western region of Melbourne:
- Are more diverse culturally, ethnically and economically;
- Are underrepresented in sport and active recreation more than all other regions of Melbourne (refer pages 34/35);
- Belong to communities in three of the fastest growing areas of Australia;
- Experience high commute times which impacts available leisure time, and
- Have more parent and carer duties on average than greater Melbourne.
VISION: Women and girls in Melbourne’s west experience equity in access and participation in sport and active recreation

Through the development and implementation of this Action Plan, project partners will:

- Challenge and address the gendered barriers to women’s and girls’ access to sport and active recreation;
- Increase representation of women and girls in sport and active recreation across the western region of Melbourne, and
- Create positive change through region-specific actions in policies, physical environments, education and communication.

WHAT WE NEED (THE ENABLERS)

For the successful delivery of this Action Plan, the following enablers are critical:

1. A commitment by partner councils to utilise this Action Plan when planning and delivering sport and active recreation in the local area.
2. Continued regional collaboration and a partnership approach to implement the Action Plan.
3. Integration of the Action Plan into existing business and organisational frameworks which support gender equity, health, wellbeing, sport and active recreation.
4. Change agents and owners to drive strategic actions and outcomes.
5. Collaboration between councils, partners, communities and facilitators of sport and active recreation.

“There is no longer a place for the sub-category known as ‘women’s sport’. There is just sport.” Sport Australia CEO Kate Palmer on why it’s time to change the way we talk about women in sport.”

— Sport Australia
Establishment of Strategic Actions

The Action Plan provides evidence based, strategic direction to project partners in Melbourne’s west to support the planning, development, and implementation of women’s and girls’ improved participation in sport and active recreation.

It identifies 48 actions that partners will focus on to change the way in which women and girls access, participate and experience sport and active recreation.

This Action Plan identifies primary prevention initiatives at a regional scale using the social ecological model (refer page 6), which address issues of gender inequity in systems, communities and individuals.

Identified actions target:

- **Policy:** Strategic and operational;
- **Environments:** Built, cultural, social and structures of coordination;
- **Education:** Capacity building, collaboration, formal and informal structures, and
- **Communication:** Advocacy, promotion and informing.

THE REGION

Melbourne’s western region identifies with three distinct types of living; urban growth areas, inner suburban-low density and inner-city high density.

Each urban type has been identified to have some influence on participation in, and access to physical activity opportunities across the region.

Actions are regionally significant and locally adaptable. Partners will adapt the Action Plan locally depending on municipal specific requirements to build capacity and confidence of women and girls, both now and in the future.

Regional projects may be considered where external investment can be sourced.
Action Plan for Change

There is no single solution to increasing women’s and girls’ participation in sport. The social-ecological model (SEM) works on the principle that to drive societal change, you need to act across multiple levels of the model simultaneously.

Sport is central to Australian culture and lifestyle. This Action Plan recognises the importance of sports and active recreation in enabling gender equity, and a safe and harmonious society.

Applying the SEM is more likely to sustain greater impact over time than any single intervention. The value of applying this model to sport, recreation and women and girls, is that it not only identifies the individual factors influencing participation, it acknowledges the complex interactions of each individual relationship and the organisation of the community, systems of process and societal norms.

“Sport is a universal language. At its best it can bring people together, no matter what their origin, background, religious beliefs or economic status.”
— Kofi Annan, former United Nations Secretary-General
Five key strategic priorities will positively improve the experiences of women’s and girls’ participation in sport and active recreation in Melbourne’s west from 2020 - 2025.

**STRATEGIC PRIORITY 1**  
Leadership and Capability  
**Objective:** Address the imbalance of opportunity, representation and access to sport and physical activity for women and girls in Melbourne’s west through sport and community education, leadership development and capacity building.

**STRATEGIC PRIORITY 2**  
Welcoming Facilities  
**Objective:** Plan and deliver physical environments with equitable access to facilities and spaces for women and girls to participate and enjoy their involvement in sport and active recreation.

**STRATEGIC PRIORITY 3**  
Safety and Transport  
**Objective:** Provide safe and accessible spaces and transport routes to maximise opportunities for women and girls to participate in physical activity.

**STRATEGIC PRIORITY 4**  
Programming and Cost  
**Objective:** Support a mix of free or low cost programs and activities that are inclusive of women and girls of all ages, cultures and abilities.

**STRATEGIC PRIORITY 5**  
Recognise, Celebrate and Promote  
**Objective:** Generate positive messages and events that represent the diversity of women and girls living in Melbourne’s west and celebrate the achievements of local women in sport and active recreation.
### Strategic Priority 1: Leadership and Capability

**OBJECTIVE:** Address the imbalance of opportunity, representation and access to sport and physical activity for women and girls in Melbourne’s west through sport and community education, leadership development and capacity building.

#### Why?

**Focus Group findings:**
- Difficulty gaining support to allow the time and freedom to undertake physical activity.
- Positive attitudes towards physical activity and its importance.
- Importance placed on female role models within communities that women and girls can relate to.
- Bias and low capability of instructors and facilitators to deliver recreation services and programs for women and girls because of gender, ability, age, ethnicity and culture.

**Literature Review findings:**
- Create gender-focused conferences and workshops; strengthen current female-focused programming; support female leaders and open pathways for potential leaders (Casey, 2-14; Equity is the Game; O’Neil et al., 2015).
- Engage female role models, such as high profile players or coaches that can engage and inspire younger girls (Equality is the Game, 2017; O’Neil et al., 2015).
- Engage female mentors and promote to women and girls that you don’t have to be an elite player to be involved in sport (Equality is the Game, 2017; O’Neil et al., 2015).

**Relevance to the Western Region community:**
- Lower participation in sport and recreation than Melbourne’s average across generations in the region.
- Women and girls reduced exposure to sport and recreation environments to develop capability, confidence and awareness.
- Under representation of women and girls in existing sport and recreation settings decreasing presence and interaction with existing leadership and development.
“We don’t have any family and friends support here, we are busy making friends, we’re busy trying to settle the family… most of us are new mums… (back home) there’s so much support. We’re just shattered and broken when we reach a new country with zero support”.

— Indian woman, urban growth area

“It’s humiliating when you’re older and you can’t keep up and you deal with that but then you’ve got someone screaming at you or just saying do it this way, do it..... keep up with the class”

—— 65+ woman, urban growth area
Strategic Priority 2: Welcoming Facilities

OBJECTIVE: Plan and deliver physical environments with equitable access to facilities and spaces for women and girls to participate and enjoy their involvement in sport and active recreation.

Why?

Focus Group findings:

• Women and girls demand a diversity of sport and active recreation opportunities in varied formats.
• Many women and girls did not feel comfortable participating in traditional sporting and physical activity spaces.
• Older women experience issues with the temperature of changing facilities at leisure centres, too cold making showering and dressing post swim unpleasant. Fear of sickness in the winter months.
• For women with children, childcare is a significant consideration to enable their participation, alternatively providing activities that involve their children.

Literature Review findings:

• Ensure that sport participation products or programs meet the particular needs and motivations of girls and women e.g. providing opportunities that are social, flexible, non-competitive and consider child care options (O’Neil et al., 2015).
• Ensure the facility is appropriate; review access and usage policies to ensure fair access to spaces and times; universal adoption of equitable policies; strategies and audit tools. Provide accessible and clean facilities. Have female friendly changing facilities (O’Neil et al., 2015; Sport and Recreation Victoria, 2017; VicHealth, 2015).

Relevance to the Western Region community:

• Women and girls access sports facilities in the west only half as much as males.
• Women and girls currently participate more in activities that are not provided in sports facilities.
• Residential growth is creating new communities which do not have timely access to new local sport and recreation facilities reducing connection and engagement.
• Inner west facilities are aging and limit women and girls engagement.
• Large numbers of children aged under 15 years requiring critical childcare considerations for parents and carers.
"Girls worldwide who play sport are more likely to attend and stay in school, more likely to finish their education, more likely to be in better health and earn higher wages during the course of their lives."

- The Honourable Dame Quentin Bryce AD CVO

Sport and Recreation Victoria - The Female Friendly Sport Infrastructure Guidelines

Provides information and advice on how to deliver more gender equitable environments. The information assists community sport and recreation clubs, governing sport bodies, recreation facility management organisations, as well as local government bodies.

‘A number of women raised concerns about their physical safety when looking to exercise in outdoor environments. All women had a heightened awareness about protecting their safety within the outdoors, which mean they rarely would use deserted parks and running trails to be physically active’.

## Strategic Priority 3: Safety and Transport

**OBJECTIVE:** Provide safe and accessible spaces and transport routes to maximise opportunities for women and girls to participate in physical activity.

### Why?

#### Focus Group findings:
- Safety concerns on public transport, particularly when waiting at more remote train stations and bus stops.
- Preference for women-only programs and activities to participate in physical activity.
- Concern about physical safety when looking to exercise in outdoor environments in the early morning and evening.
- Outdoor surfaces are often uneven and difficult to navigate. Fear of falling and causing injury.
- Lack of own transport and reliance on public transport can restrict the choice of facility and access.
- Distance of leisure facility to public transport, requirement to walk a distance to access the location.
- Recreating alone reduces sense of safety, but coordination of obligatory group participation is restrictive.

#### Literature Review findings:
- Participation rates are lower for women experiencing social and economic challenges regardless of the cause, for example those from culturally and linguistically diverse backgrounds, those with a disability and those from low socio-economic backgrounds (Cortis et al., Jenkin et al., 2017; O’Neal et al., 2015).

#### Relevance to the Western Region community:
- Transport is a significant issue for disability groups, migrant women and those aged 65 and older.
- Outer western suburbs are serviced poorly by Public Transport and road congestion is significant.
- Use of primary sports facilities by traditional male sports.
- Women and girls sports are generally facilitated on or in smaller less developed facilities with reduced transport access.

“Safety on public transport is an issue. I won’t go on a bus. I go on a train sometimes but even that gives me anxiety”.  
— 65+ female, inner low density

</tbody>
</table>
Strategic Priority 4: Programming and Cost

OBJECTIVE: Support a mix of free or low cost programs and activities that are inclusive of women and girls of all ages, cultures and abilities.

Why?

Focus Group findings:

- Programming of activities to be scheduled outside of regular work hours (9.00am – 6.00pm).
- Desire to participate in community led activities, that are culturally familiar.
- Dislike to sign up for direct debit membership options, feelings of loss of control of money, incorrect amounts debited, insufficient funds resulting in penalties.
- Higher cost for casual visits or one-off upfront payments to participate is prohibitive.
- The high costs of participating in community sports clubs discourages women's participation.
- Flexibility of programming and ad hoc attendance is important to women and girls.

Literature Review findings:

- Develop, promote and mainstream alternative sports; ensure there are sport-related participation products or programs that meet the changing needs of people throughout significant life stages, from young children to older adults (O’Neil et al., 2015).
- Investigate the motivations of the target group by speaking with them and consider how best to provide and promote participation opportunities that support these motivations (VicHeath 2015).
- Cost of participation seems to disproportionately affect women and girls for a variety of reasons. Women generally earn less than their male counterparts, and when families have to make choices, often male participation opportunities are prioritised. Women facing disadvantage are particularly vulnerable to cost pressures (Cortis et al., 2007; Jenkin et al., 2016; O’Neal et al., 2015).

Relevance to the Western Region community:

- Preference to participate in culturally familiar activities.
- Low socio-economic families.
- Importance of walking for all women all times of the year.
- Use of facilities for traditional sports competition and training in peak times.
- Night time access to free and reduced fee access to facilities and programs is restricted by traditional sport and daylight.

Daughters of The West

Daughters of the West is a free ten-week health and physical activity program for women of all ages (18+) and abilities offered across the Western Region Councils. The program incorporates one hour of health education on a topic of interest for women each week, followed by one hour of physical activity. In 2018, free child care was offered at one session each week to enable mothers/female guardians to attend. This was a great addition to the program that meant that many more women were able to access the program.
Sports Ground and Pavilion Allocation Policy

Moreland City Council introduced a Policy to address the inequity within sports clubs. The policy requested clubs to be inclusive of women, juniors, people with a disability and people from culturally diverse communities, or risk losing allocation of a ground to a club who is being inclusive. Moreland was the first council in Victoria to prioritise the allocation and use of sporting grounds and pavilions to clubs which demonstrate inclusiveness of women and girls. Female participation rose from 11% (2009) to 24% (2019) and all clubs operate in accordance with policy.

http://www.activemoreland.com.au

New funding program seeks creative ways to get more Victorians moving

VicHealth is offering $500,000 in funding through its Innovation Challenge: Physical Activity focusing on two areas: making council owned facilities like pools, gyms and parks more inclusive and welcoming for women making traditional sport more inclusive for less active, disadvantaged and culturally diverse Victorians.

“I would say money, the fees associated with team sport for a season can be expensive”.

— Sudanese woman, inner low density housing

“Every time I think about sort of spending more time, getting out and spending more time on myself, I tend to decide I should be at home for the family. I tend to prioritise them over myself all the time”.

— Woman in paid employment, urban growth area
OBJECTIVE: Generate positive messages and events that represent the diversity of women and girls living in Melbourne’s west and celebrate the achievements of local women in sport and active recreation.

Why?

Focus Group findings:
- Strong word of mouth network and connection to community and health services.
- Lack of knowledge of what activities and opportunities are available within their local communities and cannot readily seek these out.
- “Seeing ourselves” – clear advertisement required regarding the level of ability needed to participate.
- Body image and confidence in appearance and skills influenced women’s participation and engagement.
- Information required in multiple languages and distribution formats including paper based.
- Display images of diverse cultures so women see themselves in the marketing material.
- Mixed media approach to marketing including public transport, social media, schools, maternal child health, GPs and libraries is the best place to reach the target audience.

Literature Review findings:
- Use images of a diverse range of people. Embrace a range of marketing and promotional opportunities. Actively engage the local community by promoting your club as welcoming and inclusive for all members (Equality is the Game, 2017; O’Neil et al., 2015).
- Low level of confidence and self-belief can discourage women from participating in activity programs (Little et al., 2003), as can a lack of exercise-specific knowledge (Newson & Kemps, 2007).
- For girls and young women, self-efficacy, attitude, and enjoyment are strongly related and informed by concerns about body shape and weight management, and perceived pressure to conform to popular ideals of beauty (Coleman, Cox, & Roker, 2007; Craike et al., 2006; Dwyer et al., 2006; Eime, et al. 2013; James, & Embrey, 2002; Scheerder et al., 2006).

Relevance to the Western Region community:
- High proportion of new arrivals and Culturally and Linguistically Diverse Communities (CALD).
- Just under 40% of residents in Melbourne’s west indicate they have English and/or Australian ancestry.
- Almost two thirds of residents in Melbourne’s west have one or both parents who were born overseas (65%), compared with 57% in greater Melbourne.
- Residents in Melbourne’s west are less likely to speak English at home (52%) than residents of greater Melbourne (62%).
Gender Equity Leader of the Year Award

Melton City Council’s annual Community Achievement Awards includes the Gender Equity Leader of the Year award. This award recognises contributions from community members who ensure that information and services are inclusive of and accessible to all people. The winner of the 2019 Community Achievement Award was the first female head coach in the Gridiron League and club president. She is well known to uplift women and challenge gender stereotypes within the City of Melton.

Monitoring, Measuring and Evaluating

Monitoring of the implementation and impact of this Action Plan requires consistent and collaborative measures across all project partners. Monitoring will be reviewed by the project partners quarterly.

The following monitoring and review process will be led by the Project Partners to ensure that the Women’s Participation in Sport and Recreation in Melbourne’s West – An Action Plan for Change, remains relevant for all stakeholders. Broadly speaking, positive change will see:

- Increased diversity of sports provided that reflect the needs of women.
- Percentage of infrastructure and occupancy policies which reflect gender equity.
- A mix of local and regional sport and recreation facilities that have the capacity to cater for the growing female population and higher participation levels.
- Sport and active recreation use of community spaces integrated with other community uses encouraging and supporting women’s physical activities.
- Auditing of boards, committees and coaches to confirm gender breakdown.
- Percentage of capital spend which provides well-planned, high-capacity infrastructure and facilities that minimise future risks, meet universal design principles and optimise flexible utilisation.
- Representation of diverse culture, ethnicity, generation and social economic status in programs and facility use.
- Percentage of women and girls in sport and recreation social media by local government.

PART B

PROJECT BACKGROUND AND CONTEXT
Project Methodology

The Women’s Participation in Sport and Active Recreation in Melbourne’s West: An Action Plan for Change project was undertaken over 12 months through a series of structured stages.

STAGE 1
BACKGROUND & LITERATURE REVIEW
- Inception meeting
- Confirm scope and methodology
- Industry research and analysis
- Academic literature review
- Background and Literature Review document (Volume 1)

STAGE 2
CONSULTATION
- Communications plan
- Identification of focus group cohorts
- Focus groups
- Consultation findings review and analysis
- Identification of key barriers to participation and potential enablers

STAGE 3
STATE OF PLAY MAPPING
- Regional sport and physical activity participation analysis
- Identification of demographic indicators and influences on participation
- Comparison of LGA performance against metropolitan and Victoria benchmarks

STAGE 4
ISSUES & OPPORTUNITIES PAPER
- Presentation of key issues and opportunities to Project Control Group (PCG)
- Draft Issues and Opportunities Paper (Volume 2)
- PCG review of Issues and Opportunities Paper
- Update and finalisation of Issues and Opportunities Paper

STAGE 5
ACTION PLAN PREPARATION
- Strategic directions workshop with PCG
- Draft Action Plan (Volume 3)
- Presentation of and feedback on Action Plan by PCG and stakeholders
- Finalisation of Action Plan and advocacy document
- Launch of Women of the West Action Plan
Background

The Victorian Government’s, “Active Victoria – A strategic framework for sport and recreation in Victoria 2017-2021” identifies that female participation in sport is only half that of males.

Participation rates in sport decline steeply after the teenage years for all participants. However, irrespective of age, males continue to participate in sport at double the rate of females for those aged 5 to 65+.

The decrease in sport is partially made up by increased participation in active recreation with participation levels among women significantly higher than men in non-competitive activities. Research undertaken in the development of this Action Plan reinforce the significant literature and data supporting non-competitive activities.

As evidence to support the need for an Action Plan, the Victorian Government’s Active Victoria Strategic Framework (2017) identifies:

- The lower participation levels of women in sport limits the benefits of social connectedness and community cohesion provided by organised and structured community level sport.
- Lower levels of female participation in sport reflect deeply entrenched practices, cultural norms and stereotypes in our broader society.
- Getting women and girls more involved in all roles in sport and active recreation and providing females with the same opportunities as men are essential elements in creating a broader and more inclusive state.
- There are significant groups of Victorians who are less likely to participate in sport or active recreation, including Aboriginal Victorians, people with a disability, people with poor health, recently arrived migrants and those with little or no English, and people with low incomes or living in areas of relative socioeconomic disadvantage.
- These lower levels of participation affect Victorian’s health and wellbeing and connection to community.

Government Policy

The vision for the future is one where women and girls are represented in all roles in sport and active recreation and have the same choices and opportunities to participate and lead as their male counterparts.

Participation in sport and physical activity can play an important role in supporting gender equity. Through supporting women and girls, addressing and re-shaping gender stereotypes and empowering and connecting those involved we begin to influence attitudes. It is critical that sporting environments and places where women and girls want to be active, are safe, welcoming, inclusive and accessible at the times in which they can and wish to participate.

The Victorian Government’s “Gender Equality Strategy” aims ‘to progressively build the attitudinal and behavioural change required to reduce violence against women and deliver gender equality. The Strategy draws on global evidence of what works in gender equality.’ (2018) The Strategy also considers six key settings for state-wide action, one of which is sport and recreation.
The academic Literature Review provides compelling background for the ‘Women’s participation in sport and active recreation in Melbourne’s West: An Action Plan for Change’ project with a review into Australian and international peer-reviewed research published in the last 20 years. This literature covered a range of participation contexts, from club-based competitive sport, to physical activity programs, to informal sport and active recreation.

The factors shaping girls and women’s participation in sport, exercise and active recreation predominantly cover:

- The level of the individual (the role of personal choices, feelings, attitudes and constraints).
- Their relationships with others (inter-personal factors).
- Structural and cultural (gendered norms, how sport and activities are organised and managed).

Themes and Trends

A series of broad trends and themes emerged of the intersecting personal, social and cultural factors that shape girls and women’s participation in sport and active recreation. The psycho-social research findings were distilled into three major factors that shape girls’ and women’s participation in sport and active recreation (should be taken into account when designing programs):

1. **TIME:**
   
   Women of all ages consistently identified lack of time as a critical barrier impeding their participation in physical activity;

2. **SUPPORT:**
   
   Lack of support typically in the form of family or friends not emotionally and/or psychologically supporting the activity;

3. **SELF-EFFICACY:**
   
   Belief that one can successfully perform an activity – low level of confidence and self-belief can discourage women from participating in activity programs.

In addition to individual and interpersonal factors, there are also social and demographic factors that need to be taken into consideration. ‘Women’ are not a homogenous category, certain barriers are more problematic for some groups of women than for others. Those women facing additional barriers include:

- CALD girls and women;
- girls and women with low socioeconomic status;
- girls and women with disabilities; and
- older women.

At a structural level, women are still heavily underrepresented in the governance and management of sport. In general, social groups that dominate sports participation also control its organisation and management. This, along with the persistence of historically entrenched gendered norms and feminine ideals, is an important contextual factor to consider when attempting to change the participation patterns of girls and women in sport and active recreation.

The academic review proved useful in helping to identify selection criteria for the focus groups and in guiding the formulation of focus group questions.

The full Literature Review is provided in Appendix 1.
The western Melbourne region LGAs include; Brimbank, Hobsons Bay, Maribyrnong, Melbourne, Melton, Moonee Valley and Wyndham. These are identified in orange in the Map below.

**Population**

The population of the Western Melbourne region is approximately 727,443 (June 2016) comprising 49.8% male and 50.2% female with a median age of 34. There are 189,877 families with an average children; per family of 1.9 for families with children and 0.9 for all families. The regional population is projected to reach over 1.1 million people by 2021 and is recognised as a significant growth area within Victoria.

Compared to that of Greater Melbourne 4,485,211, of these 49.0% were male and 51.0% were female with the median age of 36. Aboriginal and/or Torres Strait Islander people made up 0.5% of the population. (2016 Census)

**People – cultural language and diversity**

The most common ancestries in Melbourne’s west were English (15.9%), Australian (15.5%), Indian (5.4%), Vietnamese (5.2%) and Irish (5.0%). 52.0% of people only spoke English at home. Other languages spoken at home include Vietnamese 6.6%, Punjabi 2.4%, Mandarin 2.1%, Arabic 2.0% and Hindi 1.9%.

Compared to Greater Melbourne the most common ancestries were English 20.3%, Australian 18.3%, Irish 7.0%, Chinese 6.1% and Scottish 5.6%. (2016 Census)
The Western Melbourne Region

Median weekly household income

The median weekly household income in Melbourne – West is $1,486. The median weekly personal income for people aged 15 years and over in Melbourne - West was $625.

Compared to Greater Melbourne, the median weekly household income is $1,542. The median weekly personal income for people aged 15 years and over was $673. (2016 Census)

Levels of highest education attainment

Of people aged 15 and over in Melbourne - West, 18.3% reported having completed Year 12 as their highest level of educational attainment, 13.8% had completed a Certificate III or IV and 9.0% had completed an Advanced Diploma or Diploma. 21.8% attained a Bachelor Degree level and above, compared with 24.3% across Victoria.

Compared to that of Greater Melbourne, of people aged 15 and over 17.2% reported having completed Year 12 as their highest level of educational attainment, 12.8% had completed a Certificate III or IV and 9.5% had completed an Advanced Diploma or Diploma. (2016 Census)

Supporting the health and wellbeing of girls and women in Melbourne’s west

A key driver of this Action Plan is to support participation and gender equity in the community by encouraging both structured and unstructured physical activity by addressing and minimising the barriers girls and women face in living healthy lifestyles.

Through the Literature Review, development of the Issues and Opportunities Paper and the consultation process, five strategic priorities were identified in order to increase the participation and representation of girls and women in sport and active recreation in Melbourne’s west.

The Action Plan seeks to create ‘equitable’ opportunities for girls and women to participate in sport, recreation and physical activity.

The messages around ‘equitable’ opportunities are intrinsic to this Action Plan and require consideration of the unique needs, interests, priorities and experiences when developing and delivering services and allocating resources.

As such, this Action Plan recognises that gender inequality is a far-reaching and pressing issue and that the sport and recreation sector has a positive role to play in changing the status quo for women and girls.
Participation in Sport and Recreation

Three key sources of information have been used to provide a picture of the current participation in sport and active recreation in Melbourne’s west for females:

- Women’s participation in sport and active recreation: Issues and Opportunities Paper (November 2018).

“Sport and Recreation Spatial” is a collaborative venture of Federation University and Victoria University. It investigates and integrates data about sport and recreation participation, sport and recreation facilities, population demographics and population health for evidence-based decision making.

Key data from Sport and Recreational Spatial is acknowledged as providing important background to the Issues and Opportunities Paper (2018) whereby sport participation trends (2015–17) from 12 major Victorian state sporting associations, representing popular sports were evaluated:

Australian football
Basketball
Bowls
Cricket
Football (soccer)
Golf
Gymnastics
Hockey
Netball
Sailing
Swimming
Tennis.

A snapshot of key findings

Sport and Recreation Spatial outlines participation rates and trends by age group and geographical area. The research revealed:

- Substantial differences in participation rates for different sports among young children and adolescents and by age 30, participation rates dropped drastically in all sports.
- The highest rates of female physical activity in Melbourne’s west was non-organised sports for all LGAs other than Hobsons Bay.
- Participation of females aged 4 to 99 in Hobsons Bay and Moonee Valley were higher than the 9.3% metro Melbourne average. All others were lower and between 1/3 to 2/3 of the metro average.
- The next highest rates were seen in activities provided by (or within) sport and recreation clubs/environments.
- No commentary has been provided on patterns or trends relating to non-organised physical activity based on the lack of industry data available.

What the data shows

Data clearly shows that females residing in Melbourne’s favour non-organised physical activity. This indicates an emerging demand for related facilities, services and programs within Councils. Data also indicates the need to identify the issues underpinning the enablers and barriers for women’s participation in sport and active recreation (non-organised physical activity), in order to increase their participation.

A breakdown of each of the 12 major sports by gender and LGA region show that in general there are significantly more male than female registered sports participants for sports played within Melbourne’s west. Exceptions to this were shown in gymnastics and netball, where females were involved in much higher numbers. Hockey and swimming had similar proportions of male and female participants. The following tables show female participation rates in Melbourne’s west.
The following table shows the female participation rates per 100 persons in Melbourne’s west according to the types of physical activity they engage in.

Table 3: Rates\(^1\) of female physical activity, Melbourne’s west 2016: by organisation type\(^*\)

\(^1\) Participation rate per 100 persons in age cohort.  
\(^2\) Registrations in any of 12 major sports.
Summary of female participation rates by age cohort in Melbourne’s west compared with both the Victorian and Metropolitan Melbourne averages.

The graph below shows participation rates per 100 people (by age cohort) for each Council areas in Melbourne’s west compared with the Victorian and Metropolitan Melbourne averages.
Key Findings

Issues and Opportunities

Through a consultative process and series of focus groups, the Issues and Opportunities Paper (provided in full in Appendix 2) builds an understanding of women and girls’ physical, social and cultural determinants of participation. These determinants provide the backdrop to developing the Action Plan to engender change.

Focus groups

66 participants across 13 focus groups represented by various cohorts of women in Melbourne’s west participated in the study:

- Pacifika
- Indian
- Vietnamese
- Sudanese
- New mothers
- Women in paid employment
- 65+
- Women with a disability
- Lesbian, Gay, Bisexual, Transgender, Queer or Questioning, and Intersex (LGBTQI).

Barriers and facilitators

A number of barriers to and facilitators of participation were articulated by the young women and women participating in the focus groups.

The barriers to and facilitators of participation emerged as eight themes (shown in more detail on the next page) described as:

1. Cost
2. Knowledge/ awareness
3. Time
4. The importance of childcare
5. Role of support/ role models
6. Unwelcoming/ unfriendly environments
7. Safety
8. Transport.

Intersecting issues and identified opportunities

Of the themes to emerge, a number intersect and overlap (lack of time, need for childcare, cost, transport). This creates additional challenge in addressing the barriers to participation faced by women in the region.

That said, whilst the focus groups revealed the complex and intersecting barriers experienced by women, it also revealed the ways in which they sought to negotiate these and facilitate positive physical activity opportunities for themselves.

These discussions revealed opportunities in:

- Positive attitudes
- Self organisation in communities
- Non-traditional activities/facilities
- An alternative version of traditional sport
- Connect and communicate.

Research behind VicHealth’s ‘This Girl Can’ campaign found a universal barrier across life-stages: women feel intimidated and/or embarrassed to exercise in public because of a fear of judgement around their appearance, ability and priorities.
## Barriers and Facilitators to Participation in Sport and Physical Activity

A number of barriers (hampers) and facilitators (enhancers) of participation were identified in the focus groups:

</tbody>
</table>

### Barriers
- General cost of activities
- Necessity for membership to receive discounted rates
- Penalised as a casual user
- Cost of sports clubs
- Payment of childcare on top
- Dislike of direct debit

### Facilitators
- Requirement for flexibility
- Lack of knowledge of local activities
- Reliant on word of mouth
- Need to advertise through existing services they access (Maternal child and health nurse, GP surgeries)
- Younger women prefer information via Facebook
- Need to ‘see themselves’ in marketing material
- Intersecting issue
- Felt particularly by mothers in paid employment
- Challenges of ‘negotiating’ time
- Women’s time as the lowest priority
- Culture and socio-economic status influencers
- Scheduling of activities
- Critical for mothers
- Generally only suitable for younger children
- Quality
- Activities involving children valuable
- Needed to be affordable, easy to access
- New mothers want to have social networks
- Facilitating at-home activity
A number of barriers (hampers) and facilitators (enhancers) of participation were identified in the focus groups:

### 5. Role of support/role models
- Women who considered themselves to be sporty still required peer support
- Important for all women, particularly migrant women
- Needed to see someone similar to them doing activity
- Opportunity to attend with a friend

### 6. Unwelcoming/unfriendly environments
- Sports clubs unwelcoming/unfriendly
- Male dominated at some
- Migrant women feel they lack skills to do structured sport
- Self-conscious in fitness spaces
- Feel patronised by staff, particularly older women
- Unpleasant changing rooms

### 7. Safety
- Experiences of harassment particularly for migrant women
- Fear of outdoor spaces at night and if not busy during the day
- 65+ fear of injury and need for good surfaces
- Preference for women only spaces

### 8. Transport
- Significant issue for disability groups, migrant women and 65+
- Facilities not always well connected
- Safety on public transport
- Need opportunities within 15 minute radius
