

# Save the Bees Pollinator Garden in Byron

SW  
029

## Idea Summary

Pollinator-friendly garden based on the needs of pollinators for food, habitat, and water. It will contain a mix of native and non-native (yet well-behaved) plants, a simple water source, and appropriate, year-round habitat for native bees.

## Cost Summary

Polinator Garden - \$3,000

## Community Impact

Many native and non-native bees live in the city but they can suffer when people do not practice bee-friendly gardening. This pollinator garden, while being a beautiful space, will also be a place of learning and interaction.
