Comments: If the more than 4GL of water that will be needed by the mine for processing and dust suppression was redirected to growing vegetables, five times more jobs would be created than the 197 jobs the mine proposes to create. This is our regions, our Victorian, our Australian food bowl and this is our one and only earth, we need to protect what we have and look after it with care not destroy it for mining corporation to gain dollar value. Don't be fooled by the fake promises of bring job opportunities to our region, Kalbar your promises are fake news!
