Comments: As a resident of East Gippsland I strongly object to the Fingerboards Mineral Sand Project on environment grounds & the damage it will do & the potential long term effect it will have on the residents of East Gippsland. As it will potentially need over 3 billion litres of water annually for processing and dust suppression for 15 years I am concerned where this water will come from & the damage to the Mitchell river and Gippsland lakes. Also this amount of water shows how much water is needed to control the dust that is going to be produced which I believe will potentially pose major human and animal health risks.
