**Comments:** I have broken my submission into distinct areas for ease: TRANSPORT PLANNING A multi-level car space adjacent to each of the Sport and Recreation Hubs. 80% of all journeys to 'club' sport will not take sustainable modes of transport. ie a family driving from St Kilda for a Saturday morning soccer club away match. Plan for the TWO train lines and plan to implement both over time. Already now, peak hour key arterials are clogged. Add 80,000 new resident and 80,000 new jobs and it will be gridlock. Peak hour ferries will free up the roads. The Yarra is under-utilised in your plan. You are introducing new laneways to link to the Yarra so more boating transport makes sense A community bus that can be booked for group trips instead of loads of people driving into the area. eg could collect workers from employment precinct at weekday lunchtimes and drop them at South Melbourne Market or Bay St etc and then bring them back 1 hour later. Win:Win if there is an event planned at one of the hubs in the evening, a free community bus could collect people from an area or station or tram stop to encourage people to leave their cars at home WASTE Sufficient bins and dog bins and doggy bags Sufficient clearing/refilling timetable BEAUTY Instead of bus stops have community stops. They function as bus stops but are planned to be larger and offer a nice space to residents. Extend the paving and seating and planting so that people who are walking can gather, meet, rest there. Have bins and water fountains at every community stop. Have an overall umbrella signage for the entire FB. eg Toorak has the fancy metal original white signs (see attached) Obviously, we need to pick an appropriate and relevant style Overall streetscape style for each precinct SUSTAINABILITY Rooftop agriculture -offer developers some incentives/reductions etc in building in which the rooftop is not going to be used Utilise any dead space for planting
