Comments: I am opposing the Kalbarri mineral sands mine in East Gippsland. We must preserve everything in this area that is of such magnificent natural beauty. The Mitchell River is one of the last unpolluted wild rivers in this state, and must be protected for future generations. We can not risk any form of mining or development that could potentially pollute this river, and all areas downstream including the Gippsland lakes. The impact of any potential polluting of the Mitchell river and Gippsland lakes would have long lasting effects on us all as a community and could greatly affect the huge tourism industry we have in this region. We must preserve all areas of such immense natural beauty that we have here in East Gippsland, it is so important now, more than ever before, to appreciate and preserve for us all and future generations!!!
