Comments: In regard to the Kalbar Mining project at The Fingerboards, I am not objecting to mining in general but am objecting to pollution of dust and chemicals entering our atmosphere and watercourses and thus causing illness and cancer in our young children and general population. If there is any contamination at all or depletion of our clean air and depletion of our water supply thus causing more severe water restrictions these are my objections. Also Kalbar should sign a Statutory Declaration that Kalbar will not pollute our environment, deplete our water supply and natural water course, Kalbar will supply their own water as agreed in the beginning from recycled water and Kalbar will totally regenerate the land and vegetation of the land and if Kalbar fails to comply with this written declaration they will be liable to prosecution from the High courts for breaking the laws they agreed to in this Statutory Declaration. This is the only way this mine should go ahead and without this Statutory Declaration the Mine should not go ahead. Companies need to be made accountable for their actions and State and Federal Government and ICAC need to hold these companies accountable or prosecute them for failure to uphold the Law and their terms of Contract.
