

Rental housing Regulation Submission

I would like to see a regulation setting out minimum of Methamphetamine Contaminated Properties in relation to all rental property. Not unlike the New Zealand standard ' Properties affected by meth' or that of other jurisdictions.

A Meth test result could be quantified on a condition report and cross referenced with a test after a tenant exits and kept on file as the ingoing test with the next tenant.

The standard safe level could be set as maximum health intervention level of 0.5 µg/100 cm² or lower.
