

Have the decisions made by folk who live within the districts who have to suffer the consequences of their decisions.,instead of being influenced by city based leftists and greens whose lives go on the same whatever the decision .

I was brought to a soldier settlement farm to live when irrigation commenced here in 1951,was brought up on s farm until 1968. I worked away all over the country,returned after many,many yeas away .

I am appalled to find what was a food bowl feeding Australia and the world now semi desert wasteland due to massive amounts taken for the " envireonment "

Which those who do not know what the envireonment was in the past but are pulling the strings ,are now creating what it was not in the past.

There are records in swan hill and Echuca where the river boats carried freight in 1870 s to early 30'th century complete with photos of river boats stuck in the dry Murray river bed .this was a regular occurrence in those days.the Murray did not run all year,every year.that is fact.the rivers envireonment is being altered from its original state with these regular envireonmental state.

Decisions made continuously from irrigators is ruining the primary production in these areas and turning the country into a relative wasteland
