Comments: To the enquiring and advisory committee, my family and I have lived in East Gippsland for almost 50 years and in that time we have developed a respect and appreciation for the beautiful landscapes and environment in which we live. The Kalbar mine is threatening this serenity, and they're lack of transparency from the beginning has been incredibly unprofessional, misleading and threatening. The shareholders of this proposal have not only been aggressive to our local farmers and landholders, but the proposed mine will also greatly threaten our tourism and food industries. It will contaminate our food bowl and the resulting pollution will cause extreme damage to the estuaries throughout East Gippsland. This mine also threatens our local aboriginal culture, and the Gunaikurnai people. There is nothing positive that will be gained from the mine, only significant losses to our community and the environment. I entirely appose the development of the fingerboards mineral sands project.
