Attachment 3:

Comments: I strongly oppose the Fingerboards mine, or any mine in East Gippsland. Our natural environment, healthy farming land, clean rivers and drinking water is far more valuable than any proposed financial benefits such a destructive mine might temporarily bring for our unique region. It's way beyond time politicians, elected officials and bureaucrats and other commercial interests put the health of our fragile environment and communities first. People are sick to death of permanent environmental destruction for the short-term financial gain of a few and the myth of employment. As this mine is also to benefit mainly overseas interests, East Gippslanders say a strong no to this destructive, polluting proposal! Start putting the interests of our kids and the environment first, rather than last for a change!
