Comments: As a rate paying resident I am extremely opposed to the construction of the proposed tram and emergency services bridge from Collins Street to Lorimer St to service Fishermen's Bend. 1. There would be a safety issue if the current proposal were to take place, the children's playground would be right next to the tram line! 2. Has anyone actually tried to get on a tram at Harbour Esplanade and go up Collins St to the city recently, since the opening of 4 new high rise apartment buildings, the trams are all full coming and going, what used to be a pleasant trip into the city has now become 'will we catch this one or wait for the next' and the next is always full! Is there going to be a tram system similar to a train? by that I mean one tram immediately after the other...that's how it would have to be to cope with the extra residents you are proposing that will make their homes in the new development. 3. Our property would be devalued, screeching trams constantly going past from early in the morning until very late at night would impact on our peaceful neighbourhood not to mention the noise of emergency vehicles. We purchased here with the very pleasant view of the boats and yachts on the river and in the marina, that was a real draw card, if the bridge is constructed it will severely restrict large boats and yachts. 4. That little park between the ANZ buildings should be preserved, we watch the workers enjoy that patch of green every day when they take their breaks, there is not enough park/green area in this part of South Wharf, why take more away? 5. Monorail works beautifully in Taiwan and other large cities in the world...it's quiet and efficient, has anyone looked into the possibility of a quieter option?
