**Comments:** Environmental impact during construction especially around noise and mud from the site is a concern. How long is construction and will it happen concurrently around rail upgrade Access in and out of GBO during construction end product and how access will be impacted. The Greensborough station will be upgraded during this time and we are concerned about access in and around Greensborough as the station will be closed for two years and buses will have to have access throughout and around Greensborough. A majority of our customers come from Grimshaw Street Watsonia and it is important that access is maintained for them to come over the development. This is also is the problem with cars from off the current freeway and coming around Diamond Creek Road access into Greensborough.
