Attachment 3:

Comments: I am cocerned about the potential polution of my water and food source being in such close proximity of the proposed open cut mine! Metung, where I live, receives its water from the Mitchell River. I shop locally and buy my vegetables and fruit from farms which use water from the Mitchell River! The 3 billion litres of water which Kalbar require each year will impact on the availability for local use as there continues to be drought like conditions in the local area! The huge tailings damn near the Mitchell River is also a real concern to me. I therefore request that the mineral sand mining permit NOT be approved!!!
