Comments: In reviewing the EES I request the committee take special note of the projected increased vehicle numbers for the Eastern Fwy as result of the proposed tollway. The EES figures put forward a range of between 9,000 and over 90,000 extra vehicles per day. These figured represent an 800% variation on projected increased vehicles onto the Eastern. Such rubbery estimates are unacceptable when trying to accurately measure the negative environmental, social, economic and tranport impacts the NE Link likely have on Melbourne. Please clarify with proponent. Thank you. Ivan Hexter
