Comments: I am against any approval of a company being allowed develop and operate a sand mine in the proposed area. This mine is situated directly above one of the largest vegetable industries in Australia. The ramifications of contamination to this area would be catastrophic for the whole of Gippsland Other primary industries within this area would also be under threat. They say they will provide over 200 jobs for local people. This is miniscule compared to the amount of people that would lose there jobs if this mining industry was to expand or contamination occurred. My fear is once this company gets permission to operate there will be no stopping them from spreading all over the district and taking over many people's livelihoods
