## **Explanation**

Submitter #4 is pleased to see this proposal to expand the range of material to be composted and processed into useful products. The design appears to be well-considered and deals with the issues we have been concerned about in other applications for works approval, namely air quality, ground water, dust, noise and potential health effects. We also note the potential for increased employment in producing renewable resources.

**If you would like to submit additional materials (such as documents, photographs, tables or figures) as part of your submission, please attach them here or to your email.**
