Please provide your comments on the works approval application in the box below		<p>Given the applicant's extensive history of flouting the rules, breaching laws and extensive remedial work still to be done in relation to these breaches at their facilities across other sites in Australia (some of which are still unresolved from 2017) no exactly confidence-inspiring.</p> <p>There are also significant and sensitive wetland/groundwater resources which will just end up contaminated as a result of this development.</p>
