Comments: I am writing this submission in support of families and friends who will be directly effected by the mine. The location chosen will not only turn the lives of families upside down when they can no longer live in their homes or farms passed down from generation to generation due to the cancer causing dust particles settling in their homes daily but also the volume of water from a river reduced to a trickle in some areas at the Hight of summer. Not to mention the significance of the land to the culture and heritage of our indigenous communities. For the jobs it will create it will surely destroy so many more and the worst of the damage this mine will cause will be realised too little too late for so many in what is a thriving farming community that so much of Victoria relies on for produce and will also have follow on effects for supply and prices of the fresh fruit and veg for families already struggling with the cost of living. The location of this mine is simply the stupidest most thoughtless suggestion!!
