Comments: Dear Advisory and Inquiry Committee Members, I am writing to express my strong opposition to the proposed "Kalbar Mine". I have a respiratory condition [REDACTED] and may consider not remaining in this region if the mine proceeds. There are a multitude of potential environmental concerns, which I consider cannot be adequately addressed. There is potential exposure of radio active substances. Widespread dust potentially dispersing these carcinogenic materials into the environment. Incomplete analysis of ore samples. What material was analysed in EES statement? Unacceptable disturbance to, and use of above and below ground water sources. Proximity to homes and food producing properties/farms Dust travelling long distances and contaminating food production. Risk to tourism, long term agricultural jobs, noise etc. Unacceptable to allow compulsory acquisition of private land for infrastructure outside mining project boundaries. It is my opinion that none of these risks has been, or can be, adequately addressed. I urge this panel not to support this project in this location. Thank you for your consideration,
Sincerely, Maxie-Lou Hatton
