Comments: As part of NELP Trinity Grammar playing fields are imposed on by works associated with the tunnel exit. In compensation NELP will fund the building of replacement of eight tennis courts. Trinity GS has decided to build twelve courts which the school has chosen to locate in the treed northern boundary area of their grounds This necessitates the removal of more than 100 mature trees and consequent loss of habitat. Has the advisory committee added in all the habitat destruction on private lands to their deliberations about the impact of this project? Can Trinity be influenced to at least , if it must relocate to the treed area, containing the habitat loss by only replacing the courts lost to NELP thus saving perhaps half the mature trees. My preference would be for them to choose another area in their extensive grounds for these courts Valerie Bourke
