Attachment 2:

Attachment 3:

Comments: The 3068 Group (Inc) raises the following concerns with this project. - Impact on health due to emissions from extra vehicles funneled into the Eastern Freeway, and on occupants in the tunnel. - Reduction in open space for recreation and biodiversity - Noise and overshadowing impacts on Yarra Bend Park. - The project will make Doncaster Rail impossible. This is not an acceptable outcome. - Extract Traffic predicted for the Eastern freeway is grossly underestimated. - The widening of the Eastern Freeway is not consistent with the traffic projections and is unnecessary. - Using min twentieth century transit planning. - The project is yet another on-ramp for the East-West link to join with the West Gate Tunnel mega-roads. - Increased congestion throughout Melbourne due to lack of investment in public transport. - Increased CO2 and other emissions exacerbating global warming and ocean acidification leading to the climate emergency. - Project disregards the Yarra Rive Protection Act. - Potential to disrupt aboriginal heritage sites along the river.
