**Comments:** Dear Inquiry and Advisory Comitee Members, I am writing in response to the EES conducted proposed Mineral Sand Mine Project. I do not believe the project should go ahead due to its potential for - environmental damage - negative health effects on the local community - destruction of important indigenous cultural sights - negative effects on the lively hood of local - farmers - destruction of a beautiful tourist destination As a family we enjoy travelling to Gippsland to enjoy the beautiful natural environment. The potential polluting of the Mitchell River, effect on wildlife and the massive water requirements for the project are of great concern. The area has just come out of yet another drought and will no doubt be in drought again in the next twenty years. It seems if nothing else impractical to commence a project with an annual 3 billion litre water requirement. Thank you for your time, Kathryn Rogers
