Primary interests:

- Protection and conservation of wildlife and habitat

Comment

Globally, and in Australia, wildlife species and numbers are diminishing at a rate that is ever increasing. Australia has the worst history of species extinction due to habitat loss, clearing and farming practises, property development, and hunting. Australia must step up and change our destructive thinking and habits around wildlife and natural areas; we must create/keep wildlife habitat in ALL developments, farmed land, and public places that provide an extensive and safe habitat and corridor for our native species.
