Comments: To Inquiry and Advisory Committee, RE: Objection to Mineral Sands Mine by Kalbar Operations Pty Ltd I would like to thank you for taking the time to hear our submission in regards to the EES Proposed Fingerboards Mineral Sands Mine Project. The area of East Gippsland has been part of my entire life due to the fresh air, lakes & rivers for fishing activities and all-round beautiful countryside. Each year I visit the area to enjoy these mentioned regional features and I'm glad to know I am contributing financially to the economy of this beautiful regional area. Fishing is a regular activity that I enjoy, and I pay my fishing licence when required knowing my money should make its way back into the lakes and rivers for preservation for future generations. The impact on the environment with this high risk proposal so close to the Victorian food bowl and the lakes and rivers that bring in annual tourist dollars, defies logic. I'm sure I am one of thousands of Victorians that make several visits per year to enjoy fishing, camping, water sports and more. I can't see how the mines water demand and toxic dust wont impact on the eco system so close to the Mitchell river. This area must be preserved for future generations to enjoy and not for the short term financial gain of a corporation that has no long term interest in the area. The idea that this mine is good for the local economy is also ludicrous. The Government should be increasing its support for the local industries already established instead of putting them at risk. Local rate paying citizens and tax paying Victorians should be the priority instead of the interests on any foreign entity. Common sense must prevail in this decision and should the mine be approved then the decision makers should be held accountable for any negative regional impact.

To Inquiry and Advisory Committee,

RE: Objection to Mineral Sands Mine by Kalbar Operations Pty Ltd

I would like to thank you for taking the time to hear our submission in regards to the EES Proposed Fingerboards Mineral Sands Mine Project.

The area of East Gippsland has been part of my entire life due to the fresh air, lakes & rivers for fishing activities and all-round beautiful countryside. Each year I visit the area to enjoy these mentioned regional features and I'm glad to know I am contributing financially to the economy of this beautiful regional area.

Fishing is a regular activity that I enjoy, and I pay my fishing licence when required knowing my money should make its way back into the lakes and rivers for preservation for future generations.

The impact on the environment with this high risk proposal so close to the Victorian food bowl and the lakes and rivers that bring in annual tourist dollars, defies logic. I'm sure I am one of thousands of Victorians that make several visits per year to enjoy fishing, camping, water sports and more. I can't see how the mines water demand and toxic dust wont impact on the eco system so close to the Mitchell river. This area must be preserved for future generations to enjoy and not for the short term financial gain of a corporation that has no long term interest in the area. The idea that this mine is good for the local economy is also ludicrous. The Government should be increasing its support for the local industries already established instead of putting them at risk. Local rate paying citizens and tax paying Victorians should be the priority instead of the interests on any foreign entity.

Common sense must prevail in this decision and should the mine be approved then the decision makers should be held accountable for any negative regional impact.

Best regards,
