**Comments:** To whom it may concern, I am writing this to play some small part in helping stop this mine from happening. This country needs to wake up and realise the damage these mines are causing the environment and destroying the culture of Australia. Australia has long been hard working farmers and this mine being placed would jeopardise the lively hood of many farmers that require the use of the Mitchell River. I understand the government wants to make money in order to sustain life in Australia but we need to change how we go about it. We are consistently lacking efforts to preserve and protect our natural habitat. We are a country known for our great outdoors and that people treasure that outdoors, both foreigners and citizens alike. If we keep up this damage to the environment we won't have it left in years to come. Please consider mine and the thousand other pleas of help to stop this happening. Kind regards, Owen.
