Comments: Dear Inquiry and Advisory Committee members, I am writing this submission about the EES for the Fingerboards mineral Sands mine project by Kalbar. I strongly oppose the mine. I moved from WA 4 years ago to tranquil Lindenow South. I have witnessed the destruction mines can cause to environment after living in WA for 10 years. Money is all these mines care about! Fingerboards, Glenaladale, Walpa, Woodglen, Fernbank, Lindenow, Lindenow South, all areas that will be negatively affected by this mine. All these areas are surrounded by picturesque scenery including flora and fauna, Aboriginal heritage, schools, family homes, history, agricultural industry including cattle, sheep and vegetables. The impact of this mine from the dust is a major health concern for humans, animals and the food we consume from the Lindenow Food Bowl. The water that the mine will use from the Mitchell River is a major concern. The potential for leakage of slurry into the Mitchell River is a Major concern for aquatic life. The noise and 24/7 trucks on our roads are a major concern. I also find it unacceptable that private land around the mines border, that has been in families for many generations can be used by the mine. Please stop this mine from taking hold on our precious environment and resources. Thank you.
