Comments: Dear Inquiry and Advisory Committee members. I am writing about the Kalbar EES for the fingerboards mineral sands mine at Glenaladale. I strongly oppose the mine as a resident of Calulu area which is within 5km from the mine. I oppose the mine as an [REDACTED] who is concerned about our air quality. I oppose it because I am concerned about the radioactive particles that will be lodged in our lungs, potentially causing cancer. These radioactive particles will be in our waterways and our food chains for us and the whole of bairnsdale. These particles will be on the vegetables that are grown and washed in Lindenow and sent all over sydney and australia and will be contributing to health problems far and wide. The long term health effects for thousands of people are not known. We have to stop this mine to protect the health and jobs of our children. If this mine proceeds it has the potential to destroy our clean green image in the vegetable industry. Please think carefully before allowing this international company to distroy our regions future. Regards Wendy Gilmore
