

**SUBURBAN
RAIL LOOP**

Changing the way people live and move around Melbourne and Victoria

Suburban Rail Loop will transform Victoria's public transport system and deliver significant urban renewal outcomes for Melbourne. It includes a new rail link connecting Melbourne's middle suburbs and integrated precinct development associated with its new stations.

Suburban Rail Loop will connect every major railway line from the Frankston line to the Werribee line.

It will improve the liveability of growth areas by establishing a direct rail connection between Melbourne's major employment, health, education and activity precincts outside Melbourne's central business district (CBD).

Three new transport super hubs at Clayton, Broadmeadows and Sunshine will also connect regional Victoria into Suburban Rail Loop, enabling more direct and convenient journeys.

Suburban Rail Loop will be a catalyst for renewal, creating opportunities and great places for people to live and work.

Growing

Melbourne is Australia's fastest growing city with population projected to reach almost 9 million people by 2056.

Suburban Rail Loop will support sustainable population growth, attract investment and generate jobs in our suburbs so that Melbourne can continue to grow in a way that benefits everyone.

Connecting

Melbourne's current radial rail system needs to evolve to better connect people to jobs and services outside Melbourne's CBD and create stronger links to our growing regions.

Suburban Rail Loop means that people living in the middle suburbs and regional Victoria will no longer need to travel through the centre of Melbourne to access jobs, universities and hospitals outside of the CBD.

Reshaping

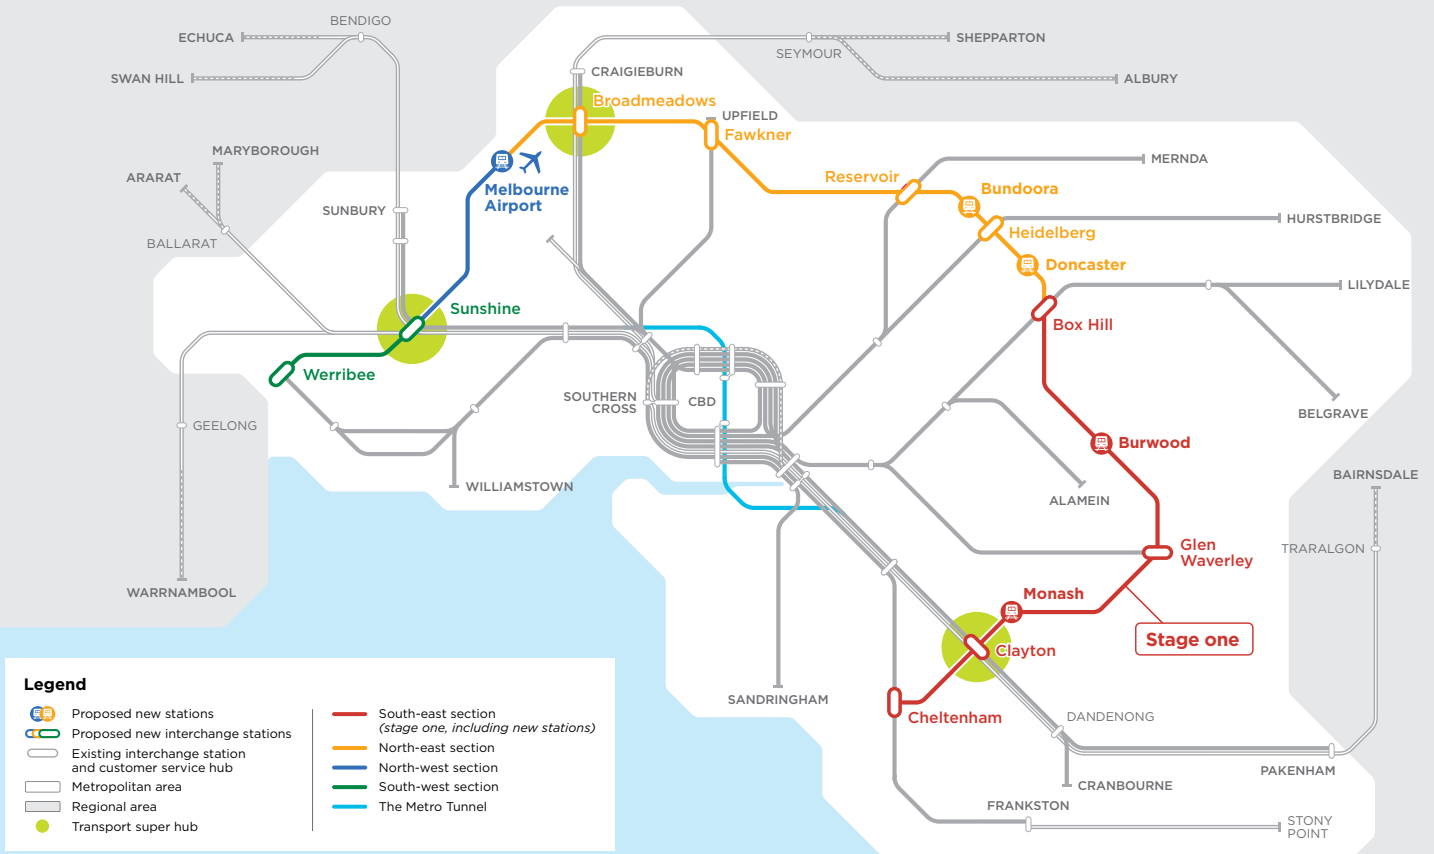

We need to build infrastructure that reshapes the way we live - consolidating jobs in precincts underpinned by rail and providing housing choice in the right places close to jobs and services.

Suburban Rail Loop will give all Victorians greater access to reliable public transport and more choice in how they want to live and work.

Project timeline

Suburban Rail Loop is the biggest infrastructure investment ever undertaken in Victoria and will be delivered over several decades.

Technical, planning and design work is well advanced to inform the detailed alignment and station location options along the Suburban Rail Loop corridor.

Geotechnical drilling and environmental investigations are also underway in the stage one area between Cheltenham and Box Hill.

These on-the-ground activities, along with expert technical assessments, will help to inform planning and design work and preparation of a full Investment Case.

Stakeholder and community engagement

The community and stakeholders will play a key role in shaping this transformational project for current and future generations.

Suburban Rail Loop Authority (SRLA) is committed to ensuring all members of the community have access to project information and are engaged in the planning and development of the project.
