

Wildlife Act Review

Submission Comment 187:

Contributor: Organisation - AWS

Primary interests:

- Protection and conservation of wildlife and habitat

Comment

Considering the increasing threats of climate change, land clearing, and habitat loss on native wildlife and the environment, the preservation of Australian Wildlife should be a priority. We need to stop clearing land which is vital habitat for wildlife and ecological processes which sustain humanity, we need to reduce our emissions and impact on the planet so we can sustain ourselves and the next generation well into the future and we need to slow down the rate of development as it greatly impacts the movement of wildlife throughout the landscape. Please preserve our precious natural ecosystems for future generations.
