Attachment 2:

Attachment 3:

Comments: people's livelihoods need to be seriously considered. We need to protect our land and water supplies to ensure that we are able to produce fresh food and water for human and animal consumption for many years to come. This is much more important than a mine that is created to make money. We can live without a mine but cannot live without food and water. If the mine cannot be proved to be safe it is NOT to proceed.
