## **Nor'West Arc cycleway extension, street renewal and wastewater work**

Today marks four months since we started work on the Nor'West Arc cycleway and wastewater upgrades. Our team have been making great progress along Wairakei and Aorangi Road.

In this newsletter, you'll find:

- A progress update
- Information of upcoming impacts in June
- Details about our next Project Update Drop-in Session
- Safety Spotlight
- Business promotional deals

## What does progress look like?

It's been another productive month onsite, with major progress made on multiple fronts. Our team has been working hard to stay on track with the adjusted schedule while coordinating the installation of key infrastructure elements.

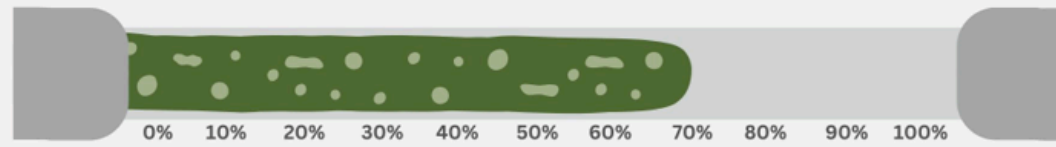

Significant progress has been made on both the Wairakei and Aorangi South pipelines. The installation of both major manhole structures marked a key milestone, allowing the team to make critical connections and backfill up to road level. With the lids now in place, we were able to reduce the length of the sewer bypass by several hundred metres — a big step forward.

This reduction meant we could shift focus back to reinstatement, completing road resurfacing and footpath works on the city side of the intersection. Meanwhile, the sewer main installation has continued steadily toward the airport side, and a second crew has kicked off work on the south side pipeline, progressing away from the intersection.

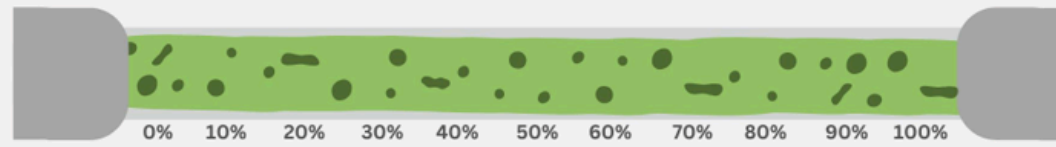

- Sections of the new stormwater network have been successfully completed, improving future resilience and flow capacity.
- We've poured another 400 metres of kerb and channel, steadily shaping the new road corridor.
- Carriageway dig outs have now begun, forming the base for the future road.
- The first sections of footpath — totalling around 300 metres — have been completed, providing a glimpse of the final streetscape beginning to take shape.

We're proud of the momentum the team has built and the progress being made across multiple scopes of work. These upgrades are laying a strong foundation for better infrastructure and long-term resilience in the Aorangi/Wairakei Road area.

## Upcoming impacts

During the month of June, both Wairakei Road and Aorangi Road will see significant progress across stormwater, roading, and cycleway infrastructure. Here's what you can expect to see on the ground over the coming weeks:

To see updated work notices of these impacts please use this [link](#).

### **Wairakei Road and Aorangi Road South (Between Colwyn Street and Wairakei Road)**

The momentum continues with several key construction activities lined up:

- Traffic signal access chambers and foundations will be installed next. These are essential to future-proofing the intersection and will require some careful coordination.
- Watermain installation is starting. To make room, a lane shift onto the newly completed asphalt will be in place — please keep an eye out for changing traffic layouts if you're passing through.
- Sheet piling will also continue as we focus on completing the top end of the wastewater line heading toward the airport side.

### **Aorangi Road North (Between Condell Avenue and Wairakei Road)**

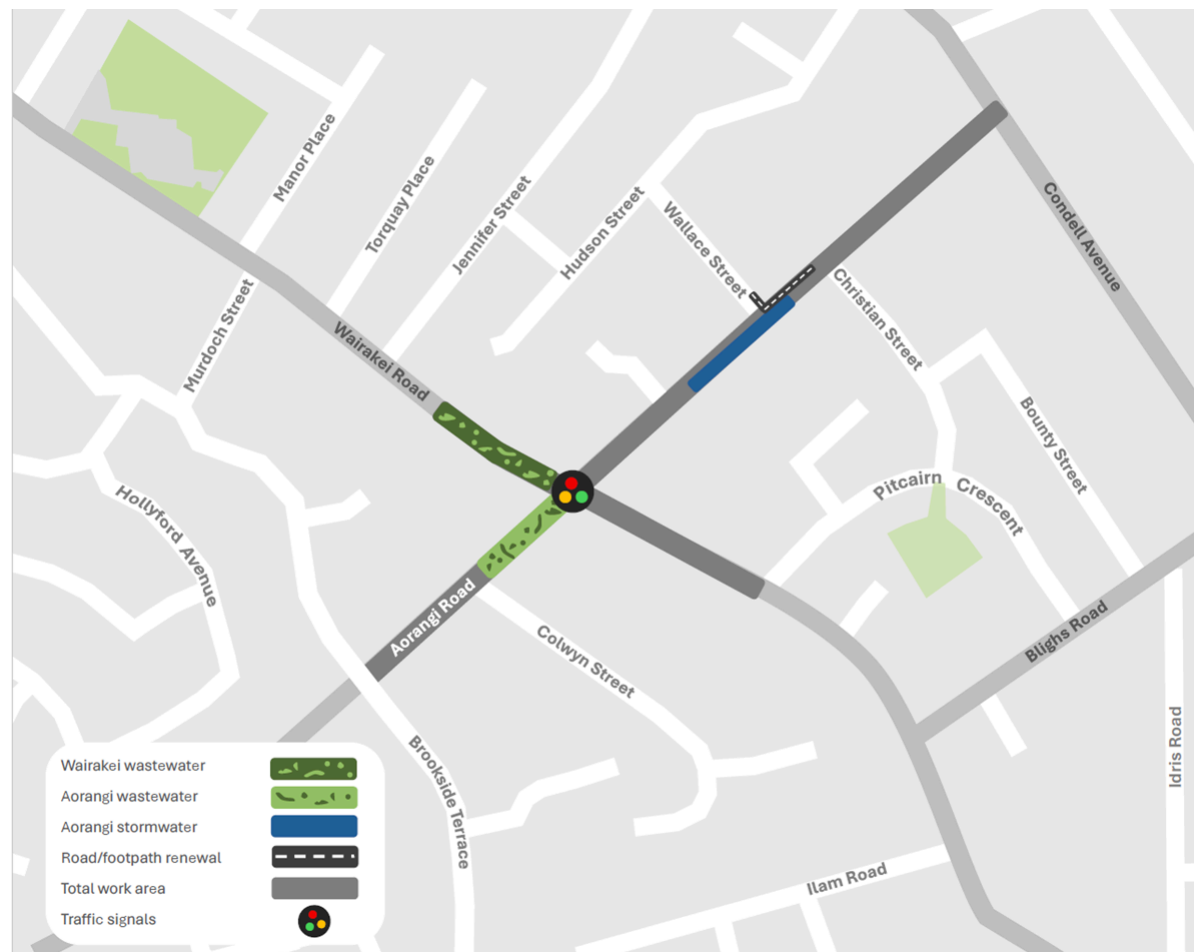

In the coming month, the pace remains steady with several key tasks lined up:

- Stormwater network installation will continue as we move through the remaining sections.
- We'll be pouring more kerb and channel, progressively shaping the road edges.
- Work on the cycleway and carriageway dig outs will continue, including backfilling and preparation for sealing.
- We're on track to seal the first section of carriageway, marking a major milestone for the project.
- Footpath installation will carry on in remaining areas.
- Finally, we'll be installing the remaining 30% of the watermain, helping to future-proof the network for years to come.

### **June 2025 map**

Please see below a map of the planned works for June 2025.

The map shows the approximate areas where we will be working and the type of work we will be carrying out in the months of June. We will continue to work with residents and businesses in these areas around managing access and disruption.

## Upcoming event

**Project update drop-in session. Elmswood Retirement Village community centre, 56 Colwyn Street, 5pm Tuesday 3 June**

We want to talk to you about our works and share our plan for what is coming. After our meeting, the Isaac project team will be around to answer any questions you may have.

Please use this [link](#) to register your interest for this event.

If you would like to sign up to our e-text system to receive regular updates, please contact Isaac Construction on 027 323 0056 or [MCRnorwestarc@isaac.co.nz](mailto:MCRnorwestarc@isaac.co.nz) or follow this [link](#).

## What's happening on site?

### Safety Spotlight: Why We Use Bunting Flags on Site

You may have noticed colourful bunting or hazard flags strung across parts of the work site. These aren't just for show

— they serve a very important safety purpose.

Bunting flags are used to clearly identify and protect critical overhead services — things like power lines, data cables, or other essential infrastructure that must remain safe and operational throughout construction. By marking these areas, we help prevent accidental contact or damage, which could lead to service outages, safety risks, or costly repairs.

In particular, when there's a risk of mobile plant (like diggers, trucks, or cranes) operating near these overhead lines, bunting flags act as a highly visible warning to operators and ground crews. It's a proactive way to reduce the risk of collisions or contact, which can be dangerous and disruptive.

For services located at ground level, visibility alone isn't enough. In these cases, we also install physical protection — like barriers or covers — to prevent vehicles or equipment from striking or disturbing the service.

As we continue to progress through this stage of works, we're pleased to share that parking in front of the shops on the bakery side will be reinstated this month and available to park. We know how important convenient access is for local businesses and their customers, and we appreciate your patience while that work was underway.

At the end of the day, the goal is simple:

- Keep critical services safe
- Keep our crews and the public protected
- Avoid incidents and unnecessary delays

It's one of many safety measures we use on site every day to make sure everyone goes home safe and the job keeps moving forward without interruptions.

## What's on in the neighbourhood?

Be sure to check out some of these fantastic businesses and deals in the area. The neighbourhood is open for business!

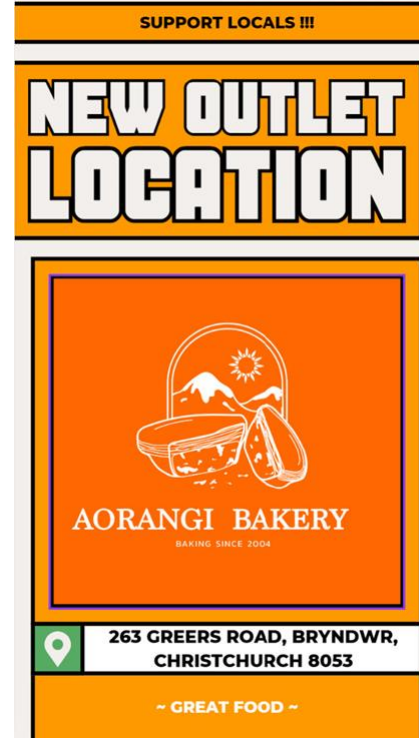

## EarCare have temporarily moved!

131 Wairakei Road, Bryndwr

Their new location is Villa 23 at the Elmswood retirement village!

[FIND OUT MORE](#)

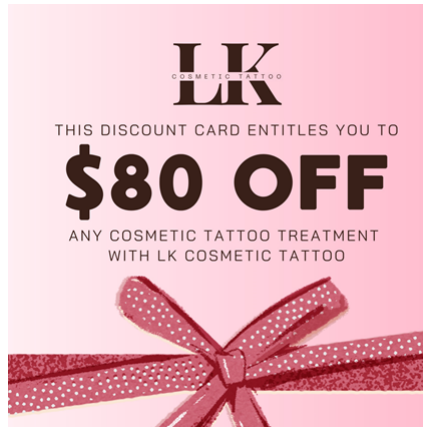

## Aorangi Bakery have moved!

263 Greers Road, Bryndwr

Pop down to their new store to grab some of their great food!
