

# HermanMiller Collection

## Eames® Molded Plastic Stool

### Designer

Charles and Ray Eames

### Original Production Date

2015

### Warranty

5 Years

Charles and Ray Eameses' career-long exploration of the chair as a single-shell form yielded numerous expressions of this idea, beginning in 1950 with the Molded Fiberglass Chairs. When the environmental risks associated with fiberglass production were realized, the Molded Fiberglass Chair was discontinued. In 2001, Herman Miller introduced the Molded Plastic Chair in recyclable polypropylene. The Eames Molded Plastic Stool was introduced in 2015. Atop a 4-leg bar- or counter-height base, the durable polypropylene shells look inviting and stylish everywhere Eames Molded Plastic Stools are used, from cafés and bistros to breakfast nooks and break rooms.

Beyond the growing selection of plastic shell colors, Eames Molded Plastic Stools are also available fully upholstered or with a seat pad for enhanced comfort. A choice of several base colors rounds out your customization options.
