

PREP & MAINTENANCE CLEANER

Clean floors. Grip that lasts.

A concentrated cleaner made for Stellmann coated floors. Use it to prep the floor before coating, then to keep it clean for years after.

Made for coated floors

Harsh cleaners are a main reason a coating wears out early. Bleach, strong acids, wax and ammonia attack it and clog the grip. This one cleans it safely.

Preps the floor first

A strong mix lifts grease and dirt from tiles, stone, concrete and vinyl, so the coating goes onto a clean surface.

Goes a long way

It is a concentrate. One 5 litre bottle makes 500 to 1,000 litres of everyday cleaning mix.

TWO MIXES, ONE BOTTLE

Before coating

50 to 100 ml

per litre of hot water.
Scrub, then rinse until the foam is gone.

Everyday

5 to 10 ml

per litre of hot water,
in a bucket or
cleaning machine.

THE EVERYDAY CLEAN

- 1 Sweep grit off dry first.
- 2 Mop with the mix, using a flat microfibre mop.
- 3 Lift the dirty water with a squeegee or wet and dry vacuum. Never skip this step.
- 4 Rinse with clean cold water and let it dry.
