1.PAS0 means no power assistance,by full electric power

2.PAS1 means speed level LOW,10-12mph

3.PAS2 means speed level,STANDARD, 12-14mph

4.PAS3 means speed level, HIGH,14-16mph

5.PAS4 means speed level,HIGH,16-18mph

6.PAS5 means speed level HIGH,18-20mph

#### Tips:

PAS1-5 has its function only under PAS riding mode.

In full electric mode, without any pedaling, please set it to PAS0. Under PAS0, the speed cannot be changed by twisting the throttle. (Maximum speed: 20mph)

Please understand that the speed here is for reference; the actual speed will be affected by rider weight, carrying weight, temperature, road situations, up-hilling, bike, and battery status, etc.

## How to use display panel

1. Press M for 3 seconds to turn it ON.
2. Press M for 3 seconds to turn it OFF.
3. Press ▲ to increase the speed level (PAS 5 is the highest speed level).
4. Press ▲ for 3 seconds to switch the front light.
5. Press ▼ for decrease the speed level. (PAS0, there is no power assist)
6. Press ▼ for 3 seconds to enter low speed cruising mode, 3-4mph.

& Bike type  
Serial number

You can find the unique bike serial number in the stem under the handlebar and find the bike type in the frame.  
Bike serial number is very important. Pls find it and write into the warranty certificate and keep record to avoid theft.
